Foam — smart, strong, flexible choice

At Royal Foam, we use high-density EPS (expanded polystyrene) as the core material for most of our products — from signage and sculptures to architectural elements. Unlike traditional materials, foam offers unique advantages across production, logistics, and long-term use:

Key Benefits:

- Lightweight — up to 10x lighter than stone or wood; reduces structural load and simplifies installation.
- Customizable — easily cut, routed, and sculpted into any shape, size, or texture using CNC and hand-finishing.
- Versatile finishes — mimics concrete, wood, stone, metal, or smooth painted surfaces with high realism.
- Cost-efficient — lower material, transport, and labor costs compared to traditional substrates.
- Durable — coated with impact-resistant, weatherproof polyurea or hard-shell coatings.
- Weather-Resistant — UV-stable, moisture-proof, pest-resistant; ideal for outdoor or high-humidity areas.
- Fast turnaround — short lead times due to in-house cutting, sculpting, and coating processes.
- Reconfigurable — easy to modify, patch, repaint, or relocate as needs evolve.

Foam is the optimal solution for brands, builders, and designers who need large-scale impact without large-scale complications. Every element we produce is fully customizable: dimensions, shapes, finishes, and textures are tailored to fit your exact design specifications. We offer a wide range of coating types, thickness options, surface treatments, and color matching.

What we make:

- Brand Activation Displays
- Mall Activation Installations
- Window Display Design
- Visual Merchandising Props
- Foam Characters & Sculptures
- Oversized Product Replicas
- Stage & Movie Props
- Trade Show Displays
- Event Decor & Themed Props
- Holiday & Seasonal Decor
- 3D Logos & Branding Installations
- Escape Room & Theme Park Props
- Museum Exhibits & Replicas
- Reception Area Displays
- Retail Interior Installations
- Oversized Foam Letters & Logos
- Floating Pool Letters
- Plastic Letters (PVC & Acrylic)
- Illuminated Letters (LED-lit Foam & Plastic)
- Small Metal Letters (Aluminum Only)
- Foam Monument & Routed Signs
- Architectural Foam Shapes
- Industrial 3D Printing
- Acrylic Letters & Logos

What we don't make:

- Products made from glass, steel, or solid wood
- Custom fabrication using iron, stainless steel, or natural stone
- Full-scale metal structures or metal signage (except aluminum letters)
- Products requiring industrial welding or woodworking

We focus on scalable, lightweight solutions that deliver high-end visual impact — fast, affordable, and fully customizable to your creative or architectural needs.

01

Brand Activations

At Royal Foam, we help brands stand out from the crowd with immersive, three-dimensional activations that leave a lasting impression. Our custom foam creations bring bold ideas to life as tangible marketing experiences — including oversized logos, interactive product replicas, and themed structures. Designed for engagement and shareability, our installations create the kind of buzz your campaign needs to stick in people's minds and their social feeds.

Transforming ideas into impactful brand moments

Modern brand activation demands more than just presence — it demands experience. At Royal Foam, we specialize in transforming abstract concepts into tangible 3D forms that catch attention, stir curiosity, and invite interaction. Whether you're launching a product, hosting a pop-up, or activating at a live event, we deliver the foam-based structures that make your campaign impossible to ignore.

Our end-to-end process covers everything from concept sketches to delivery. We craft high-impact visual elements, such as oversized logos, mascots, interactive stations, or thematic sets, all using lightweight, durable EPS foam coated with a hard, weather-resistant finish. **Each piece is fully customizable** in shape, texture, and color to match your brand identity and event vibe. From smooth and sleek to rustic or hyper-realistic finishes, we can replicate virtually any surface.

Royal Foam supports marketing agencies, event planners, and retail brands **across the US** by providing agile, scalable solutions that fit tight deadlines and ambitious ideas. Whether it's a short-term campaign or a national tour, we help you maximize engagement through unforgettable design.

Create experiences that people remember — and share

In the age of social media, brand activation isn't just about presence — it's about creating moments people want to capture and share. Our foam installations are designed to stop crowds in their tracks and spark emotional responses. Whether it's a 10-foot foam soda can in Times Square or a giant branded sneaker at a music festival, our work turns brands into landmarks.

Every activation is tailored to amplify your messaging. Need a walk-through tunnel shaped like your logo? A surreal sculpture of your product floating above a retail space? Or an oversized mascot ready to dominate the trade show floor? We make it happen — precisely, quickly, and affordably. Because foam is lightweight and customizable, it allows for bold executions without structural stress or excessive cost.

Royal Foam is a trusted partner for teams that want their brand to live beyond billboards and banners. With fast turnaround times, US-based production, and collaborative design support, we help you create experiences that drive real-world engagement and long-term loyalty.

02.

Mall Activations

In the crowded atmosphere of modern shopping malls, standing out is everything. Royal Foam delivers eye-catching, custom foam installations that stop foot traffic and turn casual shoppers into engaged brand fans. Our mall activations blend creativity and engineering to build large-scale, memorable displays — from product replicas to experiential pop-up zones — that energize retail environments and spark real consumer interaction

Command attention in high-traffic retail spaces

Mall environments are saturated with visual noise, and only the boldest brands break through. At Royal Foam, we help clients transform their mall presence into destination experiences. Whether it's a grand launch, seasonal promotion, or limited-time pop-up, our 3D foam installations deliver maximum visibility, engagement, and brand recall.

We specialize in oversized foam product replicas, life-sized mascots, branded photo zones, and interactive structures — all fully tailored to your marketing goals. Our lightweight EPS foam allows for massive scale without structural strain, and our proprietary hard-coating process adds durability for indoor or outdoor use.

Royal Foam's team works closely with creative agencies, retailers, and mall management to streamline design, production, and on-site setup. We understand the logistics of retail spaces and adapt our builds for smooth transport, installation, and compliance. Whether you're promoting a single product or crafting an immersive brand world, we help you capture attention and create conversations.

Boost foot traffic, engagement, and sales

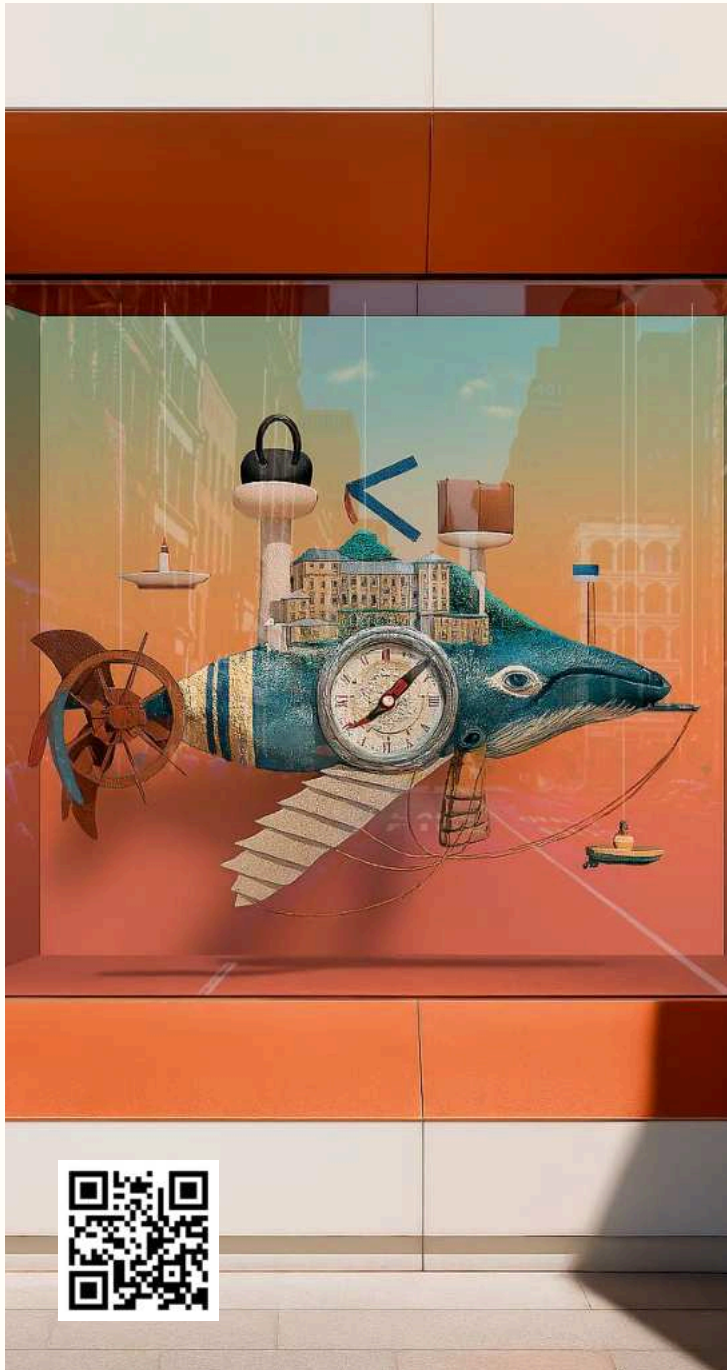

Effective mall activations do more than decorate space — they activate consumer behavior. Our foam-based experiences encourage footfall, increase dwell time, and drive word-of-mouth. People love interacting with immersive displays that invite photos, exploration, and emotional connection. These are the experiences that turn shopping trips into stories — and browsers into buyers.

From center court activations to thematic seasonal takeovers, our foam installations can scale from simple to spectacular. Imagine a 10-foot foam sneaker launch in front of Foot Locker, a winter wonderland set for a beauty brand, or a tropical escape built around your new product line. We turn those visions into reality — quickly, safely, and with creative precision.

Our US-based production team ensures rapid turnaround times, and our custom approach means no two builds are alike. Whether you're a global brand or an emerging name, Royal Foam helps you show up in malls in ways your audience won't forget — and your competitors can't ignore.

03

Window Display Designs

Crafting visual stories that sell

At Royal Foam, we collaborate with retailers, designers, and brand managers to create three-dimensional foam elements that bring this narrative to life. Thanks to the versatility of EPS foam, we can **recreate virtually any material or finish you envision**. Whether it's a sleek metallic surface, the warmth of natural wood, the roughness of stone, or even complex patterns and textures, our foam can be sculpted and coated to match any design need. Seasonal campaigns, product launches, or brand refreshes — every project is a bespoke creation tailored to fit your specific goals.

The lightweight design of our foam elements translates into reduced labor costs and downtime for your store, allowing you to focus on sales rather than setup logistics. And because our finishes are durable and weather-resistant, your display will maintain its fresh, captivating look over extended periods — no matter the season or location. With Royal Foam's window designs, your storefront doesn't just attract attention but tells a story that converts curiosity into meaningful customer engagement.

Maximize impact with flexibility and precision

Every retail space is unique — from the size and shape of the window to the foot traffic patterns and local demographics — so flexibility in design and flawless execution are paramount. Royal Foam partners closely with visual merchandisers, window designers, store managers, and brand strategists to develop custom foam installations that fit perfectly within your specific space and logistical framework.

Our comprehensive in-house production process ensures full control at every step, from initial CAD modeling and prototyping through sculpting, painting, and final finishing. This attention to detail guarantees that all components arrive ready to install, streamlining setup and minimizing disruption to your store's operations. **We take care of packaging and shipping logistics with the same precision**, ensuring your display reaches you on time and intact.

The durable coatings we use protect against wear, sunlight, and minor impacts, so your displays remain visually stunning throughout long-term or seasonal campaigns. Royal Foam's foam installations are engineered not just for beauty but for performance — withstanding the demands of busy retail environments while continuously engaging customers.

04

Event Props & Decor

Every event tells a story, and great decor makes that story unforgettable. At Royal Foam, we create bold, customized foam props and decor that elevate any event, from corporate galas to product launches, weddings, and beyond. Our pieces set the tone, spark emotion, and create perfect photo moments. Whether you're looking for elegance, playfulness, drama, or immersion, we bring your vision to life with stunning detail and larger-than-life creativity.

From concept to centerpiece

Events are temporary, but the memories they create can last forever. That's why we design foam props and decor that do more than decorate a space. **We help shape an experience.** At Royal Foam, we work closely with event planners, brands, and venue designers to deliver one-of-a-kind foam creations that become the visual soul of the celebration.

Foam's versatility means there are almost no limits to shape or scale. Want a 10-foot champagne bottle? A life-size mascot? Done. Our experts employ advanced techniques to replicate the appearance of natural materials or invent entirely new looks. **Each piece is lightweight, easy to transport, and safe to install in busy, guest-filled environments.**

Even with tight timelines or unique venue challenges, we're equipped to deliver. Our production process seamlessly blends CNC precision with handcrafted artistry, ensuring a fast turnaround without sacrificing quality.

At Royal Foam, we don't just decorate — we transform spaces into stories. Our props aren't just things to look at — they're things to remember.

Create moments people can't stop sharing

In today's event world, visual impact is everything. If guests aren't snapping selfies or sharing your space on social media, you're missing half the value. That's why our foam decor is designed with both real-world charm and Instagram-ready flair.

Our goal is simple: make your event look like the event. That means creating props that reflect your brand, story, or theme with striking clarity and playful imagination. Hosting a corporate event? We'll build a branded installation that feels polished and powerful. Launching a product? We'll create a 3D version so realistic and bold it begs to be posted.

We also think ahead: our foam decor is made to be durable, reusable, and easy to install. We understand the realities of event planning — tight windows, last-minute changes, and the need for everything to just work.

Since 1990, we've helped create magical moments for celebrities, nonprofit galas, theme parties, and private clients alike. Our props have graced rooftops, hotel ballrooms, beaches, barns, and everything in between.

So if you're looking to create a "wow" moment — the kind guests talk about long after the lights go down — Royal Foam has the tools, talent, and imagination to make it happen.

05

Oversized Foam Letters & Logos

Bigger isn't just better — it's bolder. With Royal Foam's oversized letters and logos, your brand becomes the main attraction. Whether displayed at events, in retail spaces, or outside your headquarters, these larger-than-life creations command attention and spark engagement. Lightweight yet impactful, our foam designs are built for visibility, mobility, and memorability — wherever you take your message.

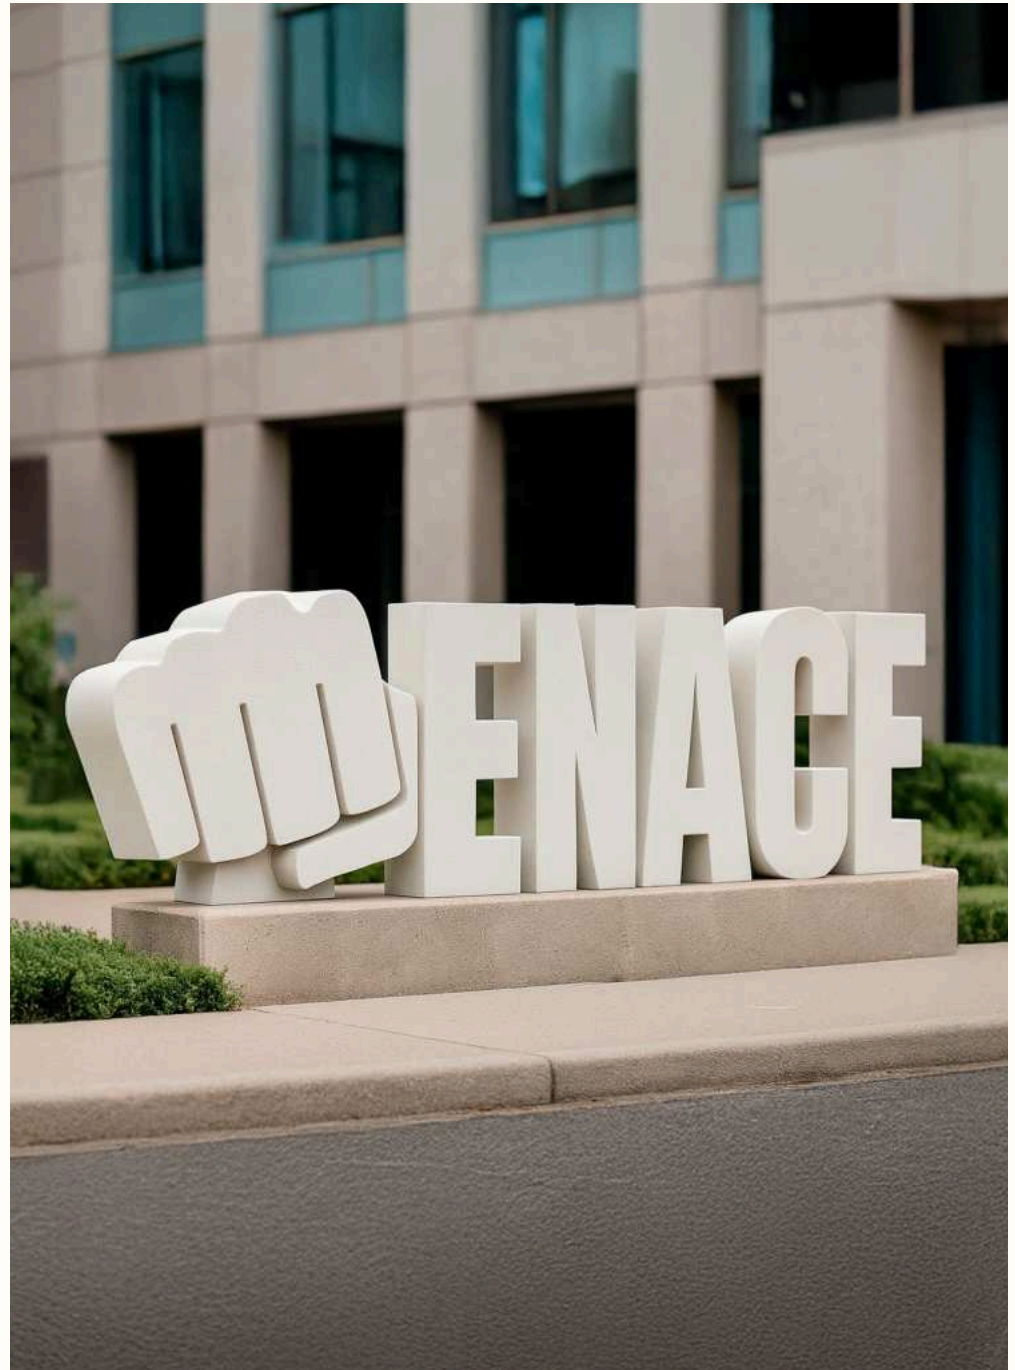

Scale up your presence

In a world overloaded with visual noise, oversized foam letters and logos break through the clutter. At Royal Foam, we specialize in crafting massive, eye-catching branding elements that become the instant focal point of any space. Whether you're planning a corporate event, grand opening, trade show, or branded photoshoot, our giant foam pieces make sure your brand doesn't just appear — it dominates.

We create each piece using high-density expanded polystyrene (EPS) foam, which **allows for impressive scale without the weight or cost of traditional materials**. From 3-foot tabletop displays to 10-foot outdoor installations, our letters and logos are strong, stable, and visually commanding — yet easy to transport, move, and repurpose.

Each element is custom-cut to your font, logo shape, or dimensional design, and finished in your chosen color, texture, or material simulation. And because foam is so easy to work with, you're not limited to straight lines: curves, bevels, cutouts, 3D layering — we bring your exact vision to life.

Lightweight, durable, designed to move

What makes foam ideal for oversized lettering and logos? It's the perfect mix of impact and practicality. Our EPS foam is dense enough to hold shape over time, but light enough to carry, install, and reposition without special equipment. Whether you're a national brand doing a roadshow or a local business installing signage at your storefront, our letters go wherever your message needs to be.

Our builds are also made to last. Each foam piece is reinforced, sealed, and coated to handle the specific demands of your space — indoor, outdoor, high-humidity, or high-touch. We offer UV-resistant finishes, weatherproof coatings, and mounting options that include ground spikes, weighted bases, brackets, or wall mounts. The use case doesn't matter; you'll get professional-grade production with fast turnaround, all under one roof.

Oversized foam branding is also incredibly photo-friendly. Whether for red carpets, corporate anniversaries or social media walls, these elements invite people to interact, pose, and post — turning your signage into organic brand exposure.

When you want your brand to show up big, bold, and unforgettable — foam letters and logos from Royal Foam deliver the scale, style, and statement you need.

06

3D Logos & Branding Installations

Your logo is more than a graphic — it's the face of your brand. At Royal Foam, we turn logos into bold 3D statements that stop traffic, spark engagement, and elevate brand presence across events, venues, and commercial spaces. Whether you're making a first impression or reinforcing your identity, our custom foam branding installations give your name, message, or symbol the scale, texture, and presence it deserves.

Logo installations that leave an impression

At Royal Foam, we specialize in transforming logos, slogans, icons, and branding elements into high-impact 3D installations that demand attention and make your brand unforgettable.

Our process begins with **understanding your identity**. We take your brand tone and translate it into a tangible structure using high-density foam and precision engineering. Our in-house design and production teams work with your existing branding assets — fonts, colors, geometry — and turn them into physical structures that amplify your message.

Our foam logos aren't limited by weight or scale — which means we can go big without compromising on safety or mobility. We offer a wide range of surface treatments — from matte to metallic, faux wood to high-gloss acrylic — to ensure your logo looks exactly the way you imagined (or better).

Need internal lighting? We've got that. Need it to hang from a truss system? No problem. Want it to be outdoor-safe and weatherproof? We'll build it to last. Royal Foam installations are not only visually stunning — they're also engineered to perform in real-world settings, with easy transportation and setup in mind.

Your logo is your calling card. Let's make sure it shows up with confidence.

From corporate identity to show-stopping visuals

In a world saturated with branding, standing out means showing up in three dimensions. Our 3D branding installations go beyond signage — they become immersive, interactive symbols of who you are and what you stand for.

We craft dimensional builds that incorporate brand marks, mascots, abstract shapes, and product-inspired forms — anything that communicates your company's story in a **bold and visual way**. We work with marketing teams, creative agencies, architects, and designers to build pieces that fit seamlessly into your campaign, launch, or activation.

We also think long-term. Many clients use our foam branding elements as modular pieces — easy to store, reuse, or update with seasonal themes. And because we offer full customization, you can choose the dimensions, coatings, colors, and mounting options that work best for your space and strategy.

At Royal Foam, branding isn't an afterthought — it's a centerpiece. Our 3D logo and branding installations don't just say who you are — they show it, boldly and beautifully.

07

Oversized Foam Product Replicas

Bigger sells better. That's the simple truth behind oversized product replicas. At Royal Foam, we turn everyday products into show-stopping foam replicas that are larger than life, without sacrificing a single detail. Whether for trade shows, retail displays, photo ops, or brand activations, our giant replicas deliver instant brand recognition and unbeatable visual impact. They don't just represent your product — they **amplify** it.

Your product, supercharged

There's nothing subtle about a six-foot soda can or a giant sneaker towering over your booth — and that's precisely the point. At Royal Foam, we recreate your product in high-density EPS foam, scaled up for maximum wow-factor, and finished to perfection so it's instantly recognizable.

From concept to completion, we ensure the replica matches your product's color, shape, labeling, and texture down to the finest detail. Whether it's a food item, electronic device, cosmetic bottle, or household brand, we use your product samples, 3D files, or packaging specs to sculpt a replica that looks just like the real thing — only much, much bigger.

Need it for an event? We can build lightweight, portable structures with reinforced cores. Installing in a retail space? We'll design for long-term display and integrate branding elements, such as signage or lighting.

Oversized replicas are ideal for social media buzz, product launches, trade show exhibits, and store openings. People want to take photos with them. Brands want to be seen with them. And with Royal Foam, you can trust that your giant product won't just look good — it'll perform like a true marketing asset.

Scale without limits, impact without compromise

What separates a decent replica from an unforgettable one? Scale, craftsmanship, and technical precision. At Royal Foam, we combine cutting-edge equipment with hands-on artistry to build oversized replicas that are visually stunning and structurally sound.

Our process begins with collaboration. You bring the product, and we translate it into 3D — scaling it to fit your goals, whether that's a 4-foot tabletop model or a 20-foot rooftop installation. Using CNC carving, hand-sculpting, and professional finishing, we bring out every logo, label, and visual cue that makes your product iconic.

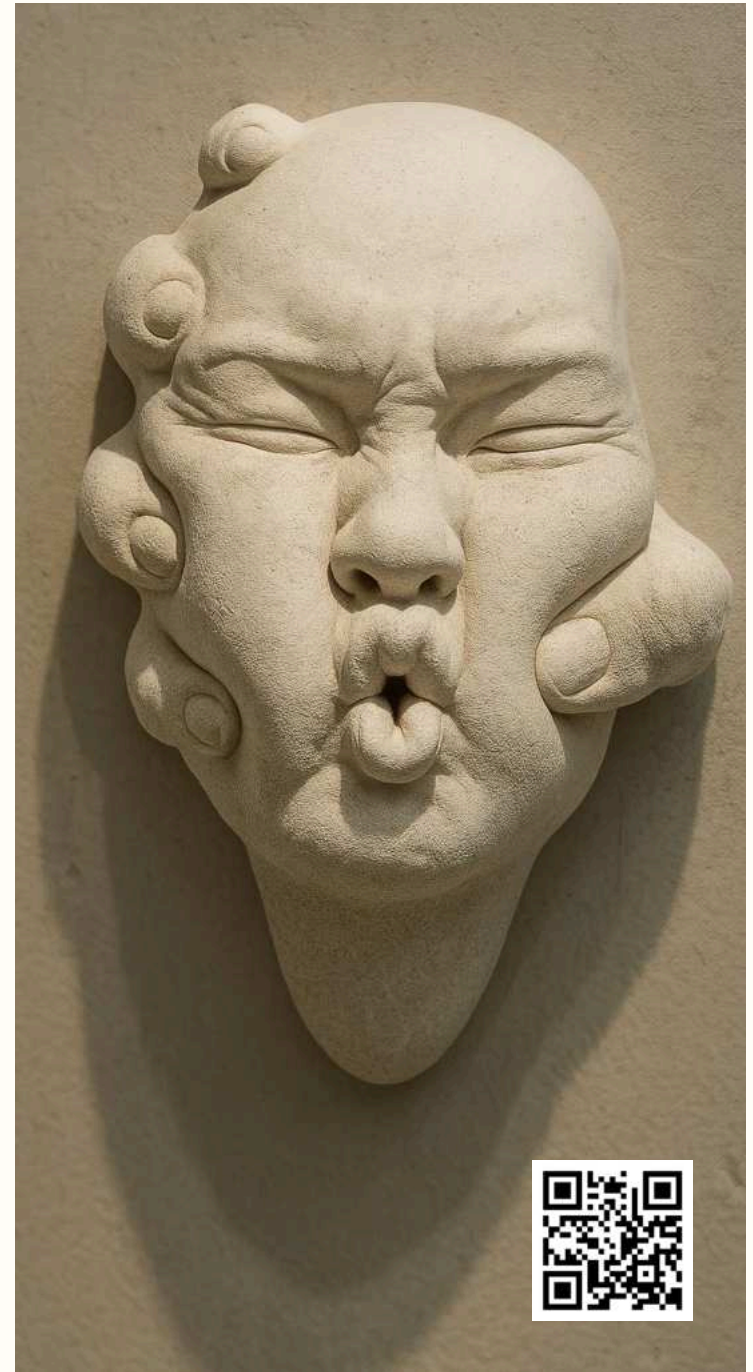

Our team **understands that B2B marketing** is about more than flash — it's about **results**. That's why we tailor each replica to your brand strategy. Do you need it to be lightweight for shipping? We'll optimize materials. Want it to be interactive? We'll add lighting, QR codes, or motion-activated elements. Require fast turnaround? Our streamlined production ensures on-time delivery — **nationwide**. We've built replicas for consumer goods, luxury brands, beverages, health products, and tech companies.

When you work with Royal Foam, you get a larger-than-life experience that commands space, attention, and admiration.

Museum Exhibits & Replicas

Bringing history to life takes more than facts — it takes form, scale, and emotional connection. At Royal Foam, we craft museum-grade replicas and exhibit components that strike a balance between visual accuracy and lightweight versatility. Whether it's a life-sized dinosaur, an ancient artifact recreation, or a thematic installation, our foam solutions empower institutions to educate, engage, and inspire — without compromising authenticity or mobility.

Precision replicas with an educational impact

Museums are where history, science, and culture meet the public, and the displays are where those worlds become real. At Royal Foam, we specialize in crafting **highly detailed** replicas and exhibit components from **high-density** foam that mimic the look and feel of real objects — from fossils and tools to architecture, sculptures, and natural environments.

Accuracy is our top priority. Our foam builds are hand-sculpted or CNC-routed for precision, then finished with custom coatings and paints that recreate stone, bronze, wood, or any other material. The result: museum-quality pieces that are visually convincing, tactile engaging, and safe for display or interaction.

Unlike real artifacts, foam replicas are lightweight, making them ideal for touring exhibits, pop-up museums, and venues with strict weight or transport constraints. We also offer modular or collapsible builds that assemble quickly and can be easily stored between installations — ideal for seasonal programming or changing exhibitions.

Custom exhibits built for curators, not just crowds

Every museum exhibit starts with a story, and our role is to build the physical elements that bring that story to life, while meeting the unique demands of educational spaces. That's why we work hand-in-hand with curators, exhibit designers, and educators to develop foam-based elements that are not only visually striking but contextually accurate and built to serve a mission.

Our team is fluent in museum workflows. We understand how display needs intersect with audience behavior, conservation regulations, and programming requirements. We offer exhibits that are both permanent and traveling, with mounting systems, modular construction, and hardware that integrate easily into standard museum infrastructure. We can also produce interpretive props — such as replicas that visitors can touch, test, or manipulate — that align with ADA standards and interactive design principles.

What sets Royal Foam apart is our ability to **combine art and accuracy**. Our builds aren't just “close enough” — they're designed to satisfy both public audiences and internal standards for quality and credibility. And because we manufacture everything in-house, our timelines are fast and our results are consistent.

09

Foam Trade Show Displays

Trade shows are loud, crowded, and competitive — your booth has seconds to impress. That's why **top brands choose Royal Foam**. We design and manufacture lightweight, custom foam displays that capture attention, spark conversations, and create lasting memories. Our trade show solutions are designed to help you stand out, set the tone, and leave a lasting impression long after the event ends.

Stand tall, stand apart

In the battle for attention on the trade show floor, being different isn't optional — it's essential. With Royal Foam's custom displays, your brand doesn't just show up — it dominates. We create visually arresting foam structures that turn standard booths into immersive brand worlds. Think towering logos, oversized products, branded arches, abstract sculptures, and entire themed environments — all designed to express your brand's personality in bold, tactile form.

Our displays are crafted from high-density EPS foam, which allows for large-scale impact without the hassle of heavy materials. That means easier transport, faster setup, and less stress for your team.

Need something modular? We design displays that break down into manageable pieces and reassemble seamlessly on-site. Want to reuse them at multiple shows? No problem — our builds are engineered for durability and easy packing. And because trade shows often come with tight timelines, **we're equipped to deliver fast, without compromising quality.**

Royal Foam's displays are more than just eye-catching decor. They're strategic brand assets designed to increase booth engagement, drive social sharing, and support your sales goals.

Engineered for impact. Designed for real-world use

A great trade show display isn't just beautiful — it's **smart**. At Royal Foam, we build displays that meet the demands of the real trade show world while making your brand look like a million bucks.

Using a combination of CNC technology, hand-sculpting, and premium finishing, we create pieces that look high-end but are lightweight and easy to manage. Foam is a game changer for large-scale visual elements — it offers the size and drama of traditional builds without the logistical nightmare. Plus, we can integrate lighting, signage, or even motion to take things a step further.

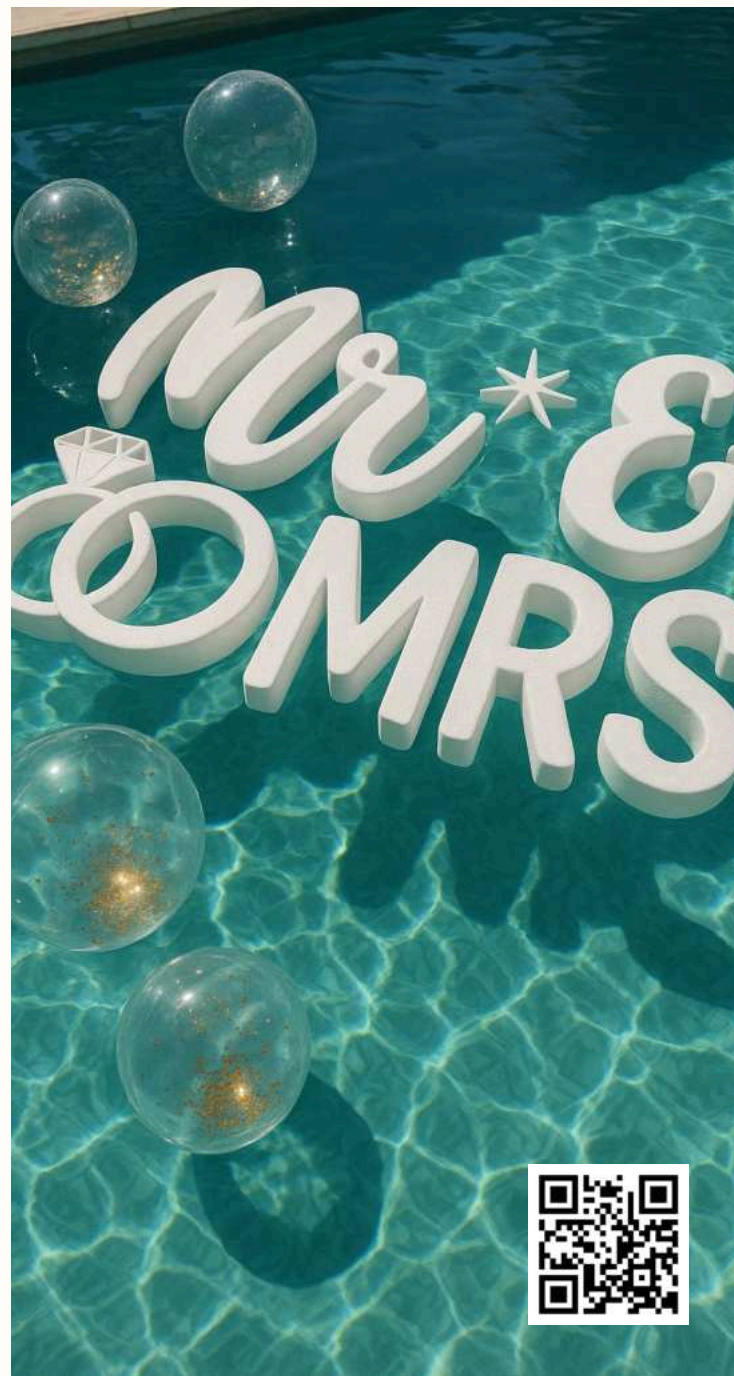

Our foam displays are designed with portability in mind. We use reinforced cores and transport-safe coatings, so your investment doesn't get damaged in transit or storage. And for companies attending multiple expos or events, we offer modular solutions that adapt to different booth sizes and configurations.

We've helped clients across industries make a serious impression. With Royal Foam, your booth isn't just another stop on the show floor — it's the one people talk about, take selfies in front of, and remember after they've gone home.

10

Floating Pool Letters

Make a splash — literally — with Royal Foam's floating pool letters. Designed to float gracefully on water, these custom foam elements transform pools into stunning event canvases. From glamorous weddings to luxury brand launches, our floating letters and logos add style, dimension, and visibility where guests least expect it — on the surface of the water.

Event decor that makes waves

Floating pool letters have become a must-have visual feature for upscale events, and Royal Foam is the go-to source for high-quality, custom-built designs that steal the scene.

We craft each set of letters from closed-cell EPS foam — **lightweight, buoyant, and perfectly stable in water.** Our foam is engineered to resist saturation and maintain its integrity in both chlorinated and saltwater environments. No tipping, no soaking, no sinking. Just crisp, clean visuals from start to finish.

Each floating piece is customized to your specs: size, shape, font, and color. Want tall block letters that glow with LED underlighting? Or script-style characters finished in rose gold paint? Need them to float with floral garlands, lighting fixtures, or even candles? We've done it all.

Clients use our floating letters for hotel openings, influencer events, film shoots, product reveals, and large-scale private parties. They're not just decor — they become the centerpiece of the event. Attendees love photographing them, sharing them, and talking about them.

Luxury looks, practical build

While the final effect may look extravagant, the design is smart and efficient. Royal Foam's floating pool letters are built with both beauty and logistics in mind. We start with buoyant, cut-to-shape EPS foam, engineered to stay upright and balanced. We then finish each piece with waterproof coatings and decorative layers that withstand heat, humidity, and constant exposure.

Despite their size, **floating letters are incredibly easy to handle**. Most can be lifted and placed by one or two people. No heavy rigging, no electrical hookups, no power sources required — just a pool and a vision. For multi-day events or installations in windy environments, we provide discreet anchoring systems to keep everything in place.

Event planners love that our designs are not only impactful but also reusable. With proper care, floating foam letters can last for multiple events. **They're lightweight to transport, easy to store, and adaptable across locations and themes.**

Whether you're creating a romantic moment or a branded centerpiece, floating pool letters offer high impact with low hassle. With Royal Foam, your message doesn't just land — it floats.

11

Foam Characters

Foam characters bring stories to life — and customers into your space. At Royal Foam, we design and produce custom 3D characters that help brands connect, entertain, and stand out. Whether it's a cheerful mascot for a product launch or a lifelike figure for an event, our foam characters instantly grab attention and create lasting emotional impact. Built for both beauty and durability, they're photo-ready, crowd-friendly, and always memorable.

Bring your brand personality to life

Every brand has a personality, and there's no better way to showcase it than through a character people can see, touch, and remember. At Royal Foam, we specialize in **creating fully customized foam characters** that embody your brand's story, values, and tone. Whether you need a lovable mascot, a fantasy creature, or a stylized version of your product, we sculpt it from scratch using high-quality EPS foam.

Our characters aren't generic — they're tailor-made to reflect your identity, color palette, and emotional message. Want a superhero-style mascot with metallic finishes? Or a surreal, oversized face with exaggerated features for a quirky product? We've got you. Using advanced carving tools and hand-finishing techniques, we shape every detail to your specifications.

Because they're lightweight yet durable, **our foam characters are perfect for in-store promotions, mall activations, trade shows, pop-up events, or permanent installations.** They can stand freely, hang, or be mounted depending on your space and strategy. More than decoration, these characters become interactive brand touchpoints — generating social shares, photo opportunities, and direct customer engagement.

Built for interaction, engineered for impact

Foam characters don't just stand around — they perform. That's why every Royal Foam character is engineered with the end experience in mind. From initial concept to final coat, we consider how the piece will be used, handled, photographed, and transported.

Our sculpting team works closely with clients and creative directors to ensure the character's proportions, posture, and personality are exactly right. Whether it's a human figure, an animal, a robot, or something completely abstract, our foam can be manipulated to reflect organic curves or geometric precision — all with stunning realism or stylized exaggeration, depending on your brand voice.

Once sculpted, we apply durable coatings that protect the surface while enhancing the visual finish — matte, gloss, textured, metallic, or UV-resistant. Need a character that can handle hundreds of selfie-takers at an event? We've made those. And we ship across the US with packaging designed for safety and ease.

Foam characters by Royal Foam aren't just props — they're brand ambassadors with personality, presence, and purpose.

12.

Foam Sculptures

When imagination meets craftsmanship, foam becomes art. At Royal Foam, we create **stunning foam sculptures that transform spaces and capture attention**, whether it's for retail, entertainment, architecture, or public events. From large-scale installations to fine-detailed statues, our sculptures bring creative visions to life with precision and visual impact. If you can dream it, we can carve it.

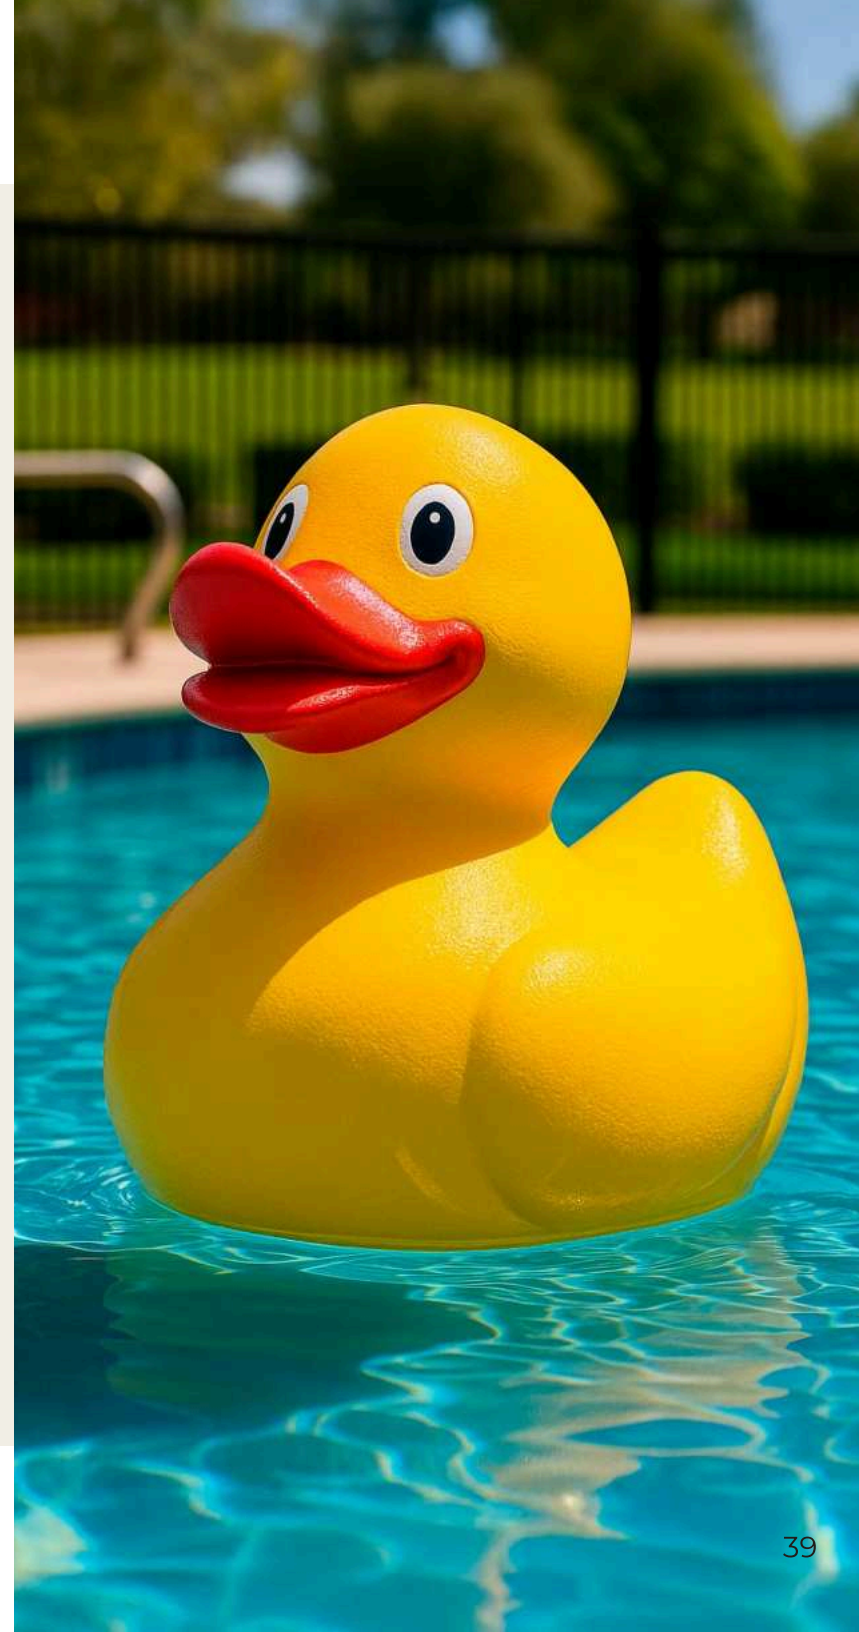

From sketch to statement piece

Sculpture is one of the oldest forms of storytelling, and at Royal Foam, we've brought it into the modern age using advanced foam fabrication. **We take your sketch, concept, or idea and turn it into a physical masterpiece** that commands attention. Whether you need a large-scale figure for a public plaza or a branded art piece for a product campaign, our team has the skills and tools to bring it to life.

Every sculpture starts with your vision, and we build on that with technical expertise, 3D modeling, and hands-on craftsmanship. We use EPS foam as the core material, allowing us to create massive forms without the weight and logistical constraints of metal, stone, or fiberglass. Our sculptors then shape, refine, and coat each piece to fit your purpose — matte, gloss, hyper-realistic textures, or artistic finishes.

Need high realism? We've created lifelike figures with expressive detail. Prefer bold abstraction? We've sculpted oversized, stylized forms for galleries and retail chains. We also offer solutions for both indoor and outdoor environments, including weatherproof coatings and reinforcement for long-term use.

With Royal Foam, your sculpture doesn't just exist — it owns the space.

Art that moves people

At Royal Foam, we design every sculpture with logistics and longevity in mind. That means considering everything from how it ships and installs to how it performs over time under real-world conditions.

Need a piece that travels to trade shows or touring exhibitions? We can create modular foam sculptures that break down and reassemble with ease. Hosting an outdoor event? We'll reinforce the structure, apply UV- and weather-resistant coatings, and ensure stability in wind-prone environments.

We serve a wide range of industries — from museums and amusement parks to luxury retail and themed restaurants. Our clients rely on us not only for bold creativity but also for consistent, worry-free execution. And because everything is produced in-house, we maintain full quality control from foam carving to finishing touches.

In short, Royal Foam sculptures are more than decorations. They're photo moments, centerpieces, conversation starters — tangible expressions of creativity that elevate your brand, theme, or event. And unlike traditional materials, foam gives you freedom: to go bigger, bolder, faster.

13

Escape Room & Theme Park Props

Immersion is everything. Whether you're building a suspense-filled escape room or a thrilling amusement park attraction, the magic lies in the details — in props that feel real, environments that transport, and set pieces that make the impossible believable. At Royal Foam, we specialize in creating custom foam props that transform spaces into fully realized worlds. Lightweight, durable, and highly customizable, our props bring imagination to life.

Props that set the scene and seal the story

In themed entertainment, there's no room for "almost." Your audience expects to step into another world, and it's the props that make or break that illusion. At Royal Foam, we help escape room owners and theme park designers bring their stories to life with custom-built foam props that are realistic, durable, and endlessly adaptable.

From crumbling stone walls and ancient artifacts to futuristic control panels — **if you can dream it, we can build it.** Our high-density EPS foam is easy to sculpt and shape but strong enough to endure heavy use, guest interaction, and rapid scene changes.

We understand that each space has a unique story to tell. That's why we never offer generic solutions. We build custom props that not only support the narrative but actively enhance it, whether through tactile interaction, hidden surprises, or clever visual cues.

Our pieces are also lightweight, allowing for easy setup, rearrangement, and transport — ideal for attractions that frequently rotate scenes or update experiences.

We know the stakes are high in this industry. One bad prop can break immersion — and one amazing one can be the highlight of a guest's memory. Let's make sure your visitors remember the latter.

Designing for thrill, safety & Repeat use

Props in entertainment spaces aren't just visual — they're interactive, high-traffic, and subject to wear and tear. That's why **Royal Foam crafts every piece with both drama and durability in mind.** We know your foam dungeon walls will be touched, knocked, leaned on, and photographed a thousand times — and we build them to handle it all without losing impact.

Our foam props strike the perfect balance: theatrical enough to wow, tough enough to last. We use a range of coatings that increase resistance without adding unnecessary bulk.

We understand that **flexibility matters**, so we can design modular elements that can be reconfigured, combined with lighting or sound effects, or used across multiple settings.

We also support clients beyond fabrication. Need concept development, installation guidance, or ongoing prop support? We're here to help from blueprint to opening night. And if you're under tight deadlines or limited space, our efficient production workflows and smart material usage keep your project on schedule — and on budget.

When you work with Royal Foam, you're not just buying props — you're investing in immersive storytelling that lasts.

14

Foam Stages & Movie Props

In film, TV, and live theater, every prop tells a story — and Royal Foam brings those stories to life with custom foam creations made for the spotlight. Whether it's a sci-fi weapon or an entire fantasy environment, our lightweight, realistic props offer the look of traditional materials without the weight or fragility. Built for impact, durability, and mobility, our stage and screen props make the impossible feel real, on budget, and on schedule.

Crafted for the camera, engineered for the set

In production, there's no room for error — everything needs to look perfect and perform flawlessly. That's why **set designers and prop masters trust Royal Foam to deliver high-impact foam props that check all the boxes:** realistic visuals, practical handling, and reliable performance.

Our props imitate wood, stone, metal, concrete, glass — whatever the scene requires. With sculpting, carving, and expert finishing techniques, we make foam look like anything but foam. We blend CNC precision with artisan craft to deliver show-ready props with incredible realism.

The benefits of foam go beyond aesthetics. Foam is lightweight and easy to transport, which makes it ideal for mobile stages, touring productions, and scenes with complex choreography or stunts. It's also safe — no splinters, no sharp edges, no metal hardware. And it's fast — when time is tight, foam allows us to fabricate, finish, and deliver faster than traditional materials ever could.

From hero props and background set pieces to full-scale scenic environments, **Royal Foam gives production teams a reliable partner who understands deadlines, budget constraints, and the demands of modern storytelling.**

Built for action. Designed to disappear

At Royal Foam, our goal is to give directors, designers, and DPs the tools they need to create believable worlds without compromising on safety, speed, or style.

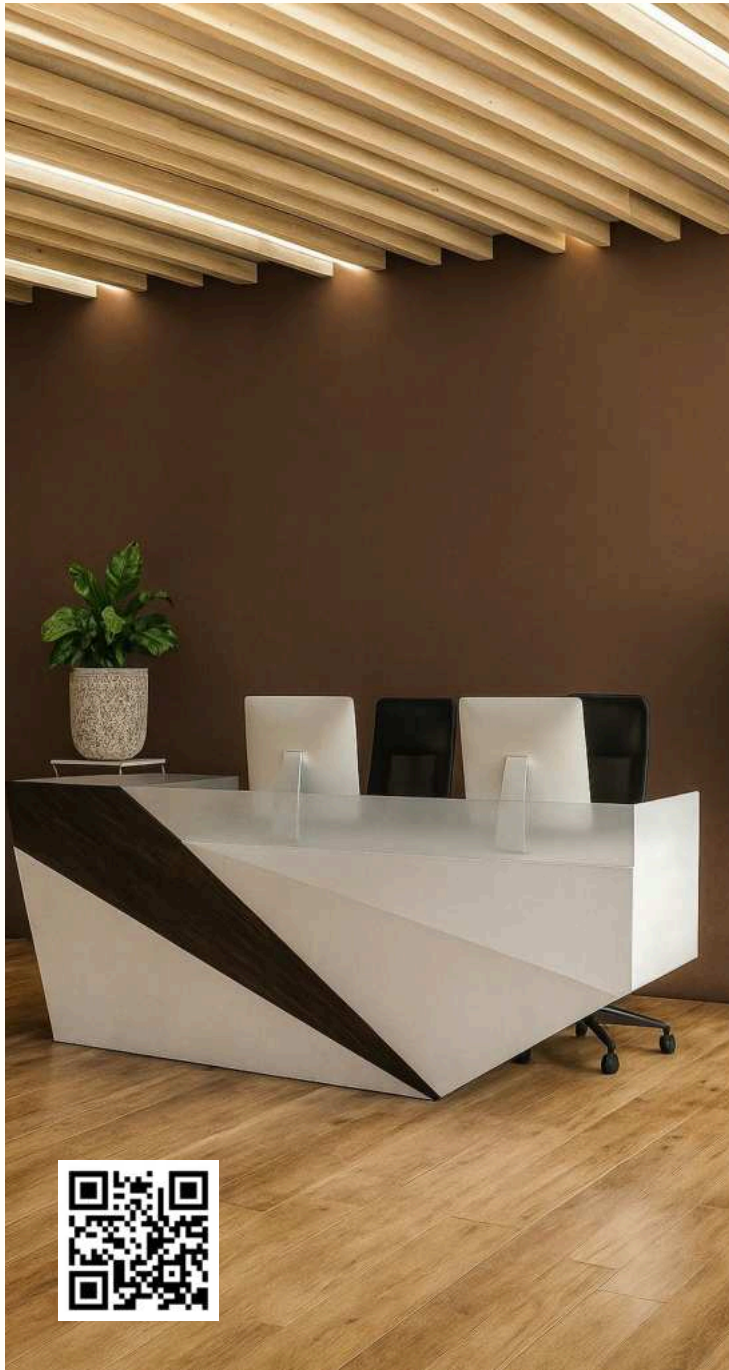

Our process starts with collaboration. You tell us what your scene needs — a haunted house interior, a post-apocalyptic vehicle, a massive sci-fi monument — and we translate it into physical form. We provide everything from pre-visualizations to 3D renders and material samples, so your team can approve every step before we enter production.

Need a single prop? We'll hand-sculpt it and finish it for close-up shots. Need a complete set? We'll coordinate modular, scalable designs that fit together flawlessly on-site. Our foam builds are strong enough to support interaction and dynamic camera moves, yet light enough for stagehands to move them quickly between takes.

Royal Foam has provided props for TV pilots, theater tours, streaming series, immersive experiences, and more. So whether you're staging a historical epic or a dream sequence, we've got the foam — and the team — to help you make movie magic.

15

Reception Area Displays

Reception areas aren't just waiting spaces — they're brand stages. The moment someone walks through your door, your visual environment begins to tell a story. At Royal Foam, we help businesses make bold, lasting first impressions with custom foam displays that reflect identity, style, and purpose. From dimensional logos to sculptural focal points, our creations turn lobbies into statements, not just spaces.

First impressions, fully branded

Every reception area has the same challenge: turn a transitional space into a memorable brand experience. At Royal Foam, we design and fabricate custom foam displays that turn blank walls and overlooked corners into visual anchors. Whether it's a freestanding sculpture, a dimensional logo, or a branded message wall, we help your space speak before a word is said.

We use high-density EPS foam to create large-scale, eye-catching pieces that resemble metal, wood, or stone at a fraction of the cost and installation time. **Our displays are ideal** for corporate offices, medical facilities, hospitality venues, retail spaces, and creative studios that want to make a lasting impression on every visitor.

Our team collaborates with architects, interior designers, and brand managers to ensure that every piece not only fits the physical space, but also the emotional and professional tone of your business.

Because foam is lightweight and easy to customize, your options are wide open — from intricate geometric forms to abstract art or oversized typography. Whether you're after sleek minimalism or a wow-factor centerpiece, our displays are built to amplify your identity in three dimensions.

Seamless integration, long-term impact

Designing for reception areas isn't just about aesthetics — it's about longevity, functionality, and cohesion. Royal Foam's display solutions are engineered for real-world use: **they're easy to install, durable enough for high-traffic spaces, and tailored to fit within existing interior design plans.**

We offer a variety of finishes — metallic, matte, textured, painted — to match your brand's color palette or mimic premium materials. Mounting can be wall-fixed, freestanding, or suspended, and we can integrate lighting, shelving, or signage elements for multifunctional impact. **Every detail is built with precision, ensuring that our pieces feel like a natural — and intentional — part of your environment.**

We also understand that your space might evolve. That's why we offer removable and modular solutions that can be repositioned or repurposed as your branding grows. Our team provides end-to-end support — from design mockups to final delivery. And because we fabricate everything in-house, **we ensure consistent quality, fast turnarounds, and total creative control.**

Reception areas are often your only chance to make a visual impact. Let's make it count — with display elements that are bold, beautiful, and unmistakably you.

16

Visual Merchandising

Visual merchandising is more than presentation — it's persuasion in three dimensions. At Royal Foam, we design immersive foam-based installations that help retailers shape the shopper experience from the moment they walk through the door. From focal-point displays and themed environments to product-enhancing props, our creations spark curiosity, guide traffic flow, and encourage longer, more profitable visits in your retail space.

Turn store space into a strategic advantage

Visual merchandising isn't just about making things look good — it's about influencing how people think, feel, and move through your store. At Royal Foam, we work with retail brands and design teams to transform retail spaces into purposeful environments where product placement, ambiance, and engagement work together to drive sales.

Using lightweight, sculptable EPS foam, we **build fully custom elements that support your retail strategy**. Each installation is carefully crafted to align with your target customer's behavior and buying psychology.

Our foam creations replicate a wide range of materials and finishes — concrete, wood, marble, chrome — without the cost, weight, or inflexibility of traditional materials. **This gives you creative freedom to execute big ideas within practical budgets and tight timelines.** Whether it's a permanent feature wall or a rotating campaign display, Royal Foam makes complex visuals easy to implement, reconfigure, or refresh seasonally.

By integrating our work into your merchandising plan, you create not just a visually appealing store. Still, a functional and persuasive one — where every display tells a story and every square foot earns its keep.

From concepts to conversions

Royal Foam supports you from concept development to delivery, ensuring that your merchandising vision becomes a reality with impact and precision. We can collaborate with your in-house team or agency to build 3D foam displays that complement your brand's identity, fit seamlessly into your space, and hold up under retail traffic conditions.

Need a themed seasonal interior that stretches across multiple store zones? A custom foam replica to amplify a new product line? A modular solution for rotating promotions? We've done it all — and we know how to make it work within budget, timeline, and operational constraints. Because foam is lightweight and easy to install, our displays are ideal for high-turnover environments where flexibility is key.

We understand that retail is fast-paced. **That's why our US-based production team focuses on fast turnarounds without compromising quality.** We handle sculpting, coating, painting, and packaging in-house to ensure consistency and accuracy — no surprises, no rework, just results. **Our clients return to us** because we make the creative process smooth and the final product unforgettable.

17

Holiday & Seasonal Decor

Seasonal decor is more than just tradition — it's an opportunity. Whether it's the warmth of the holidays or the freshness of spring, seasonal installations instantly shift the energy of a space and spark emotional connection. At Royal Foam, we craft custom foam decor that captures the spirit of the moment — bold, joyful, elegant, or whimsical — and helps brands, venues, and retailers turn any season into a visual celebration.

Bring the season to life, your way

At Royal Foam, we create seasonal installations that do more than decorate — they **transform your space**. From giant foam snowflakes to oversized pumpkins, floral arches, spooky haunted scenes, patriotic props, and everything in between, we bring every season to life with stunning precision and creativity.

Each foam piece is fully custom-made, meaning no cookie-cutter decor here. We collaborate with retail centers, hotels, corporate offices, restaurants, municipalities, and entertainment venues to design foam installations that align with your brand's personality and spatial needs. Whether you're aiming for cozy and classic, sleek and modern, or fun and unexpected, we make sure your seasonal decor feels intentional, impactful, and totally original.

Because we use high-density EPS foam, **we can build big without the weight**, making our decor ideal for hanging displays, freestanding sculptures, large lettering, themed entrances, photo zones, and interactive elements. Need it to last outdoors through winter snow or summer heat? We'll apply weather-resistant coatings and UV protection. Want to reuse it next year? We'll make it durable, easy to disassemble, and simple to store.

With Royal Foam, every season becomes a chance to re-engage your audience and renew the experience of your space.

Make it festive. Make it photo-worthy. Make it yours

In the age of social media, if your seasonal decor isn't drawing phones and cameras, it's missing its moment. At Royal Foam, we design holiday and seasonal displays that do spark interaction, boost foot traffic, and give your brand a visually shareable identity.

Our foam props are made to impress. From intricate surface textures to color-matched finishes and 3D elements, we ensure your decor looks as good as it feels. Imagine 3D hearts floating in a Valentine's-themed space, or spooky foam facades that make your Halloween display the talk of the town. But beyond visuals, **we think like event planners and brand strategists.** Our team works with you to plan strategically, design creatively, and build efficiently.

We also understand timelines. Seasonal campaigns don't wait — they hit hard and fast. That's why Royal Foam has the capacity to scale fast, deliver on time, and install with minimal disruption. We make sure everything works — structurally, visually, and logistically.

From malls to main streets, from lobbies to rooftops, we've helped hundreds of clients create seasonal moments that wow their guests and elevate their brand presence. So this year — and every year — let your space be the one people remember.

18

Retail Interior Installations

In retail, **atmosphere sells as much as the product**. With custom foam interior installations from Royal Foam, brands can shape spaces that spark emotion, drive engagement, and enhance the customer journey. From statement displays to immersive visual environments, our lightweight, high-impact solutions transform retail interiors into brand destinations that people remember — and return to.

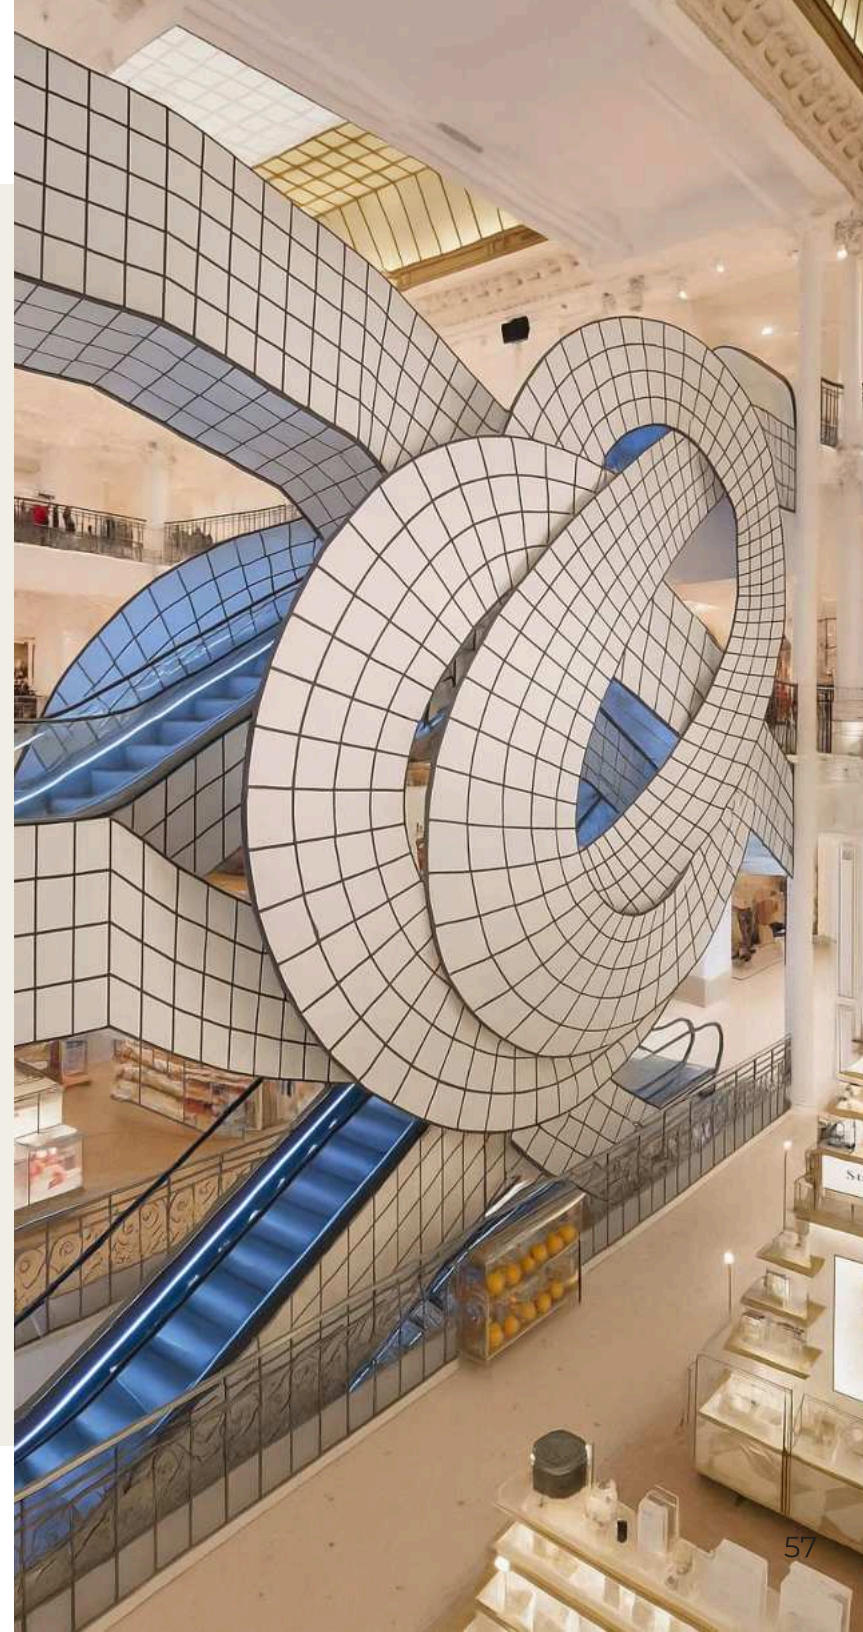

Design that converts: visuals that sell

At Royal Foam, we design and build custom interior installations that make your brand environment impossible to ignore. Whether you're curating a flagship store, setting up a seasonal campaign, or launching a pop-up experience, our foam-based elements give you the freedom to dream big and build fast.

From oversized product replicas and sculptural fixtures to branded walls, hanging installations, and interactive zones — we craft it all. Each piece is tailored to reflect your brand's personality. Foam is lightweight, flexible, and cost-effective, allowing for dramatic shapes, large formats, and intricate designs that would be too heavy or expensive with traditional materials.

Our retail clients — from boutique clothing brands to major cosmetics chains — utilize our installations to showcase hero products, create social media moments, and optimize customer flow.

Thanks to our in-house production and finishing capabilities, we can match any surface while maintaining structural lightness. Whether your campaign runs for a week or a year, your space stays flexible and striking.

Fast, flexible, on-brand retail environments

At Royal Foam, we're built for the pace of modern retail, offering design-to-installation solutions that meet tight timelines without compromising quality or creativity. **Our foam interiors** can be designed, fabricated, and delivered in a fraction of the time it takes for traditional construction — and at a far lower logistical cost.

We understand that every square foot of your store counts. That's why our team collaborates with retail strategists and visual merchandisers to maximize impact within your footprint.

What sets our retail installations apart is their **versatility**. Because our foam structures are lightweight and modular, they can be easily reconfigured, reused, or relocated across multiple store locations. This is especially valuable for national retail chains, experiential marketing activations, and visual updates across multiple sites — allowing for brand consistency without production redundancy.

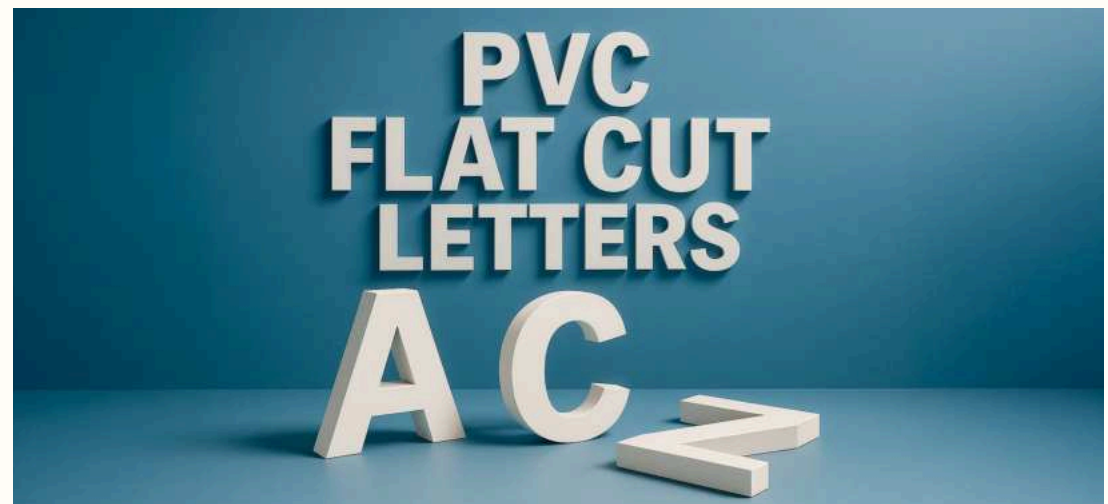

We also offer **integration with lighting, signage, shelving, and digital components**, creating multi-functional installations that blend aesthetics with utility. Whether you're going for aspirational luxury or interactive fun, our pieces are made to work as hard as they wow.

19

PVC Letters & Logos

PVC letters and logos by Royal Foam offer an ideal balance of cost-efficiency, design freedom, and durability for indoor branding. Precision-cut from high-quality PVC sheets, these elements are lightweight, versatile, and easy to install. Perfect for retail interiors, offices, exhibitions, and wayfinding signage, PVC provides a professional look that's built to last — at a fraction of the weight of metal or wood.

Precision-cut signage for everyday branding

Royal Foam manufactures **PVC letters and logos in-house** using advanced CNC routing technology for sharp edges and consistent detailing. Available in thicknesses ranging from ¼" to 1½", these signs can be cut in standard or custom fonts, as well as logos with intricate shapes. PVC is smooth, uniform, and paint-ready, allowing for vibrant colors, brand-specific Pantone matching, or metallic finishes at no additional cost.

These letters are **lightweight yet sturdy**, making them perfect for walls that cannot support heavy materials. PVC signage is commonly used in retail spaces, office lobbies, exhibitions, point-of-purchase displays, and temporary installations. Each set comes with mounting templates and hardware, ensuring quick, hassle-free installation on almost any surface.

Compared to acrylic or metal, PVC is more **cost-effective, easier to handle, and well-suited for large-volume projects or nationwide rollouts**. Whether you need a single office logo or coordinated signage across multiple locations, Royal Foam ensures consistent quality, fast turnaround, and precise execution.

Lightweight, durable, and flexible design options

PVC is known for its dimensional stability and resistance to humidity, making it ideal for interior environments where reliability matters. It doesn't warp, crack, or peel over time, ensuring long-lasting visual appeal. Royal Foam's PVC letters can be flush-mounted, raised on spacers for depth, or combined with foam backers or lighting for enhanced 3D effects.

We offer a **wide range of sizes and strokes** for fine lettering, allowing high customization for detailed logos or tagline scripts. PVC can also be layered with printed graphics, vinyl overlays, or laminated finishes to create unique textures and effects.

For clients requiring scalable solutions, our manufacturing process ensures **repeatable accuracy**. Whether you're an agency managing multiple retail locations or a contractor delivering signage packages for a franchise, we provide consistency across all units. Our team provides installation guides and technical drawings to ensure a straightforward on-site setup for your contractors.

PVC letters and logos are a practical choice for businesses wanting a professional, polished look with fast production, easy handling, and endless customization possibilities.

20

'Illuminated Letters

When visibility is critical and first impressions happen after dark, illuminated letters deliver unmatched impact. Royal Foam creates custom backlit and front-lit signage that transforms your brand into a glowing statement — day or night. Built for performance and designed for beauty, our illuminated letters help businesses stand out, shine brighter, and stay visible 24/7.

Let your brand shine after hours

In today's competitive visual landscape, visibility is everything — and illuminated letters make sure your brand doesn't disappear after sunset. Royal Foam specializes in custom-lit signage that turns ordinary letters into attention-grabbing landmarks. Whether front-lit, backlit, edge-lit, or halo-lit, **our illuminated letters bring light, clarity, and prestige to any location.**

Each sign is carefully engineered with meticulous attention. We integrate long-lasting LED modules that are energy-efficient, low-heat, and weather-resistant, ensuring optimal brightness without high maintenance or power costs.

Our illuminated letters are designed to withstand exterior conditions, but they also work beautifully indoors — in reception areas, retail walls, event spaces, and branded environments. They're UL-certified, weather-tested, and installation-ready with multiple mounting options, including flush mount, standoff systems, or integrated paneling.

For multi-location businesses, we maintain design consistency across all sites and provide detailed specs, installation templates, and ongoing support. With Royal Foam, illuminated signage becomes more than just a label — it's a **beacon**.

Performance meets precision engineering

At Royal Foam, we know that illuminated letters are more than signage — they're high-performance brand assets. That's why we design each one to deliver consistent light distribution, structural integrity, and long-term reliability. Whether exposed to harsh sun, heavy rain, or freezing temperatures, our signs are engineered to shine bright and stay strong.

We use weatherproof housings, sealed electrical components, and advanced coatings to protect against UV rays, rust, and corrosion.

From small boutique storefronts to massive architectural installations, our illuminated letters scale beautifully.

For interior applications, illuminated letters serve as functional decor. Think: glowing brand names in reception areas, accent lighting in retail spaces, or inspiring words highlighted on showroom walls. The result? Enhanced ambiance and stronger emotional connection with your space.

In short, Royal Foam illuminated letters are where branding, engineering, and creativity converge — delivering signs that don't just say your name, but light it up with pride.

2.1

Small Metal Letters

Royal Foam's metal letters deliver elegance in its purest form. Whether brushed, polished, or painted, our custom-cut metal signage is designed for businesses that value precision, permanence, and prestige. From sleek office lobbies to outdoor entryways, these letters make a **refined visual statement** — clean, crisp, and undeniably professional.

Premium material. Perfect finish. Timeless look

Small metal letters are the gold standard for permanent signage — and Royal Foam delivers them with precision, craftsmanship, and style. Whether you're branding a law office, luxury boutique, financial institution, or architectural project, our metal letters project trust, quality, and authority in every detail.

All letters are CNC-machined or waterjet-cut to ensure sharp, accurate lines. For artistic or complex fonts, we work with specialized partners to preserve full design integrity while maintaining our quality control and brand consistency.

Metal letters are ideal for flush mounting, stand-off mounting, or backplate applications. Each installation includes a mounting template and hardware kit to simplify the process, and we can **customize** the mounting system depending on surface type or location.

Whether your signage is installed in a lobby, on a reception wall, at the entrance to a building, or on a monument sign, Royal Foam's metal letters add unmatched depth, texture, and prestige to your visual identity.

Durability that performs.

Versatility that scales

Beyond their polished appearance, Royal Foam's metal letters are built for **real-world use**. These are not just “nice-to-have” elements — they’re serious tools of brand communication, engineered for longevity, performance, and flexibility across industries.

Need consistent signage across multiple locations? No problem — our metal letters are CNC-cut with repeatable accuracy, making them ideal for franchises and businesses with brand guidelines. We also offer a **wide range of thicknesses and face profiles**, including bevels and rounded edges, giving you full creative control over visual weight and dimensionality.

For architectural firms, we can provide shop drawings, CAD-ready files, and prototypes. For smaller clients, we offer design guidance and material recommendations. Whatever the scale, you get a partner who knows signage inside out — from fabrication to final install.

Our metal letters can also **integrate with other materials**: mounted onto acrylic panels, installed over foam backers for dimensional contrast, or paired with lighting for added drama. Whether you're after minimalist impact or rich, layered complexity — we'll help you build it.

With Royal Foam, your brand isn't just seen. It's etched in metal, built to last, and impossible to ignore.

22.

'Foam Monument Signs

When you need signage that makes a lasting statement, foam monument signs offer the perfect blend of strength, scale, and style. At Royal Foam, we craft lightweight, durable monument signs that mimic stone, brick, or concrete — without the cost or installation challenges of traditional materials. Perfect for entrances, campuses, business parks, and public buildings, these signs deliver a powerful presence and professional polish.

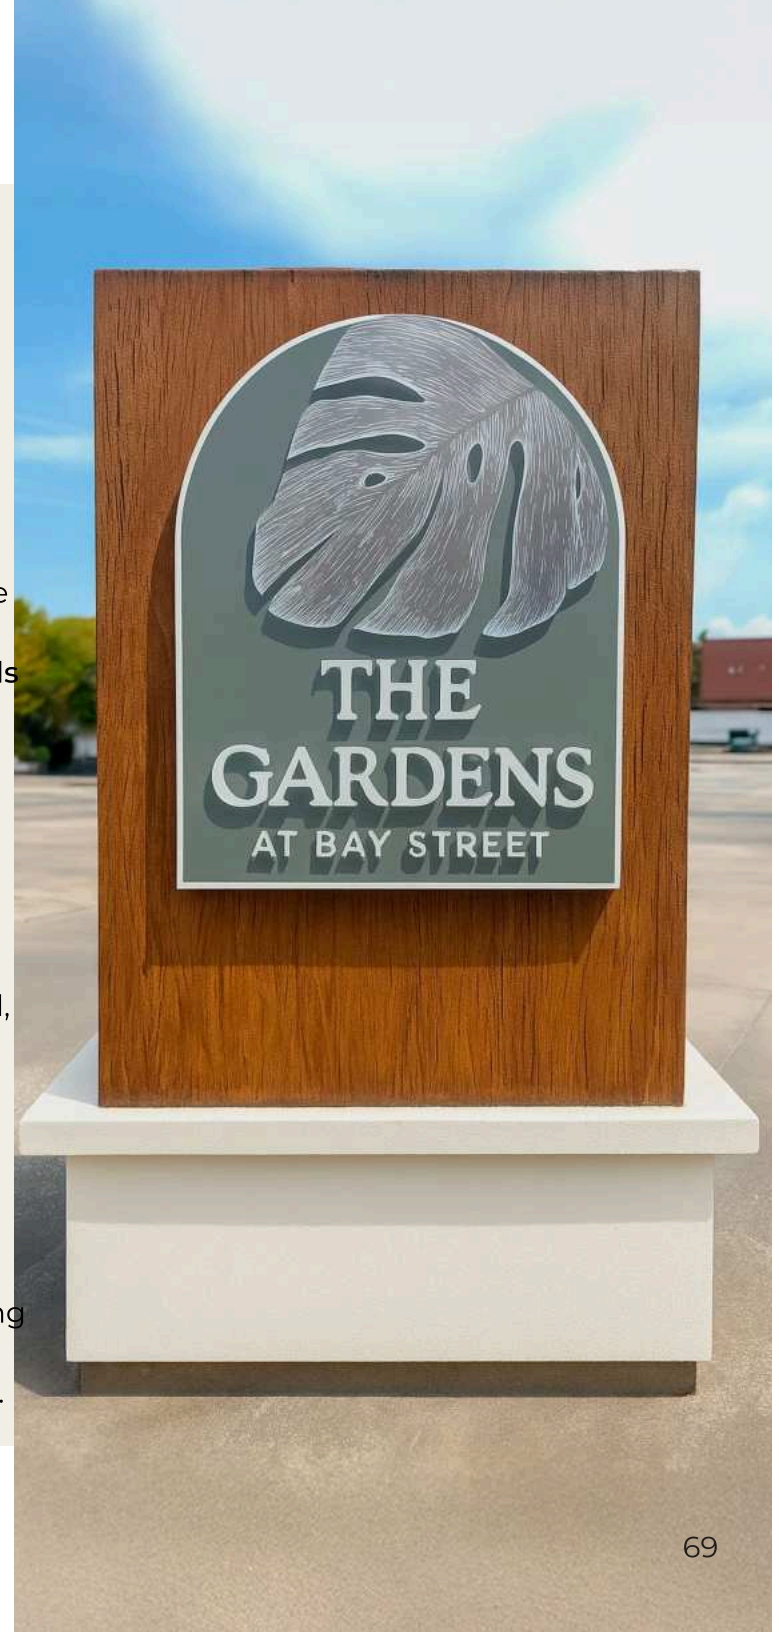

Bold impressions without the heavy weight

Foam monument signs are proof that you don't need steel and stone to build presence. At Royal Foam, we design custom monument signs that look solid and architectural — but are made with high-density EPS foam and protective coatings for a fraction of the weight and cost. The result? **Impressive signage that installs quickly, lasts for years, and looks as grand as traditional masonry.**

These signs are ideal for properties where impact matters — entrances to schools, churches, medical facilities, housing developments, and corporate campuses. We replicate the look of stucco, brick, or concrete using high-performance coatings and textured finishes.

Royal Foam monument signs are built to endure. We apply a hard, weather-resistant polyurea coating that protects the foam core from UV rays, moisture, pests, and physical impact. The result is a **monument sign that can survive years of exposure without cracking, fading, or peeling.**

Despite their durability, these signs are remarkably lightweight, which means easier transport, lower installation costs, and fewer structural limitations. We offer a variety of mounting and anchoring systems depending on the size and placement of the sign — whether it's freestanding, on a base, or embedded in landscaping.

Smart signage for long-term brand value

Monument signs aren't just about visibility — they're about establishing trust, identity, and permanence. At Royal Foam, we help you make that statement clearly and affordably.

One of the biggest advantages of our foam monument signs is design freedom. Our team works closely with you to design a sign that aligns with your branding, landscape, and functional goals.

We also take care of all the practical details: base reinforcements, anchoring systems, and electrical access for illuminated components.

Our signs are **low-maintenance**, but **high-impact**. They don't require painting, patching, or resealing. If your branding ever changes, components like letters, panels, or lighting can be updated without replacing the entire structure. That's cost-effective longevity in action.

With Royal Foam, monument signage becomes a strategic branding asset — not just a functional necessity. You get architectural-grade design, engineered performance, and seamless service from concept to installation.

2.3

Foam Routed Signs

When depth, texture, and design matter, routed foam signs bring your brand to life in dimensional detail. At Royal Foam, we use precision CNC routing to carve logos, lettering, and intricate graphics directly into high-density foam, creating signage that's visually striking, lightweight, and built to impress. It's an ideal choice for businesses that want a custom look with architectural finesse.

Precision craftsmanship with dimensional impact

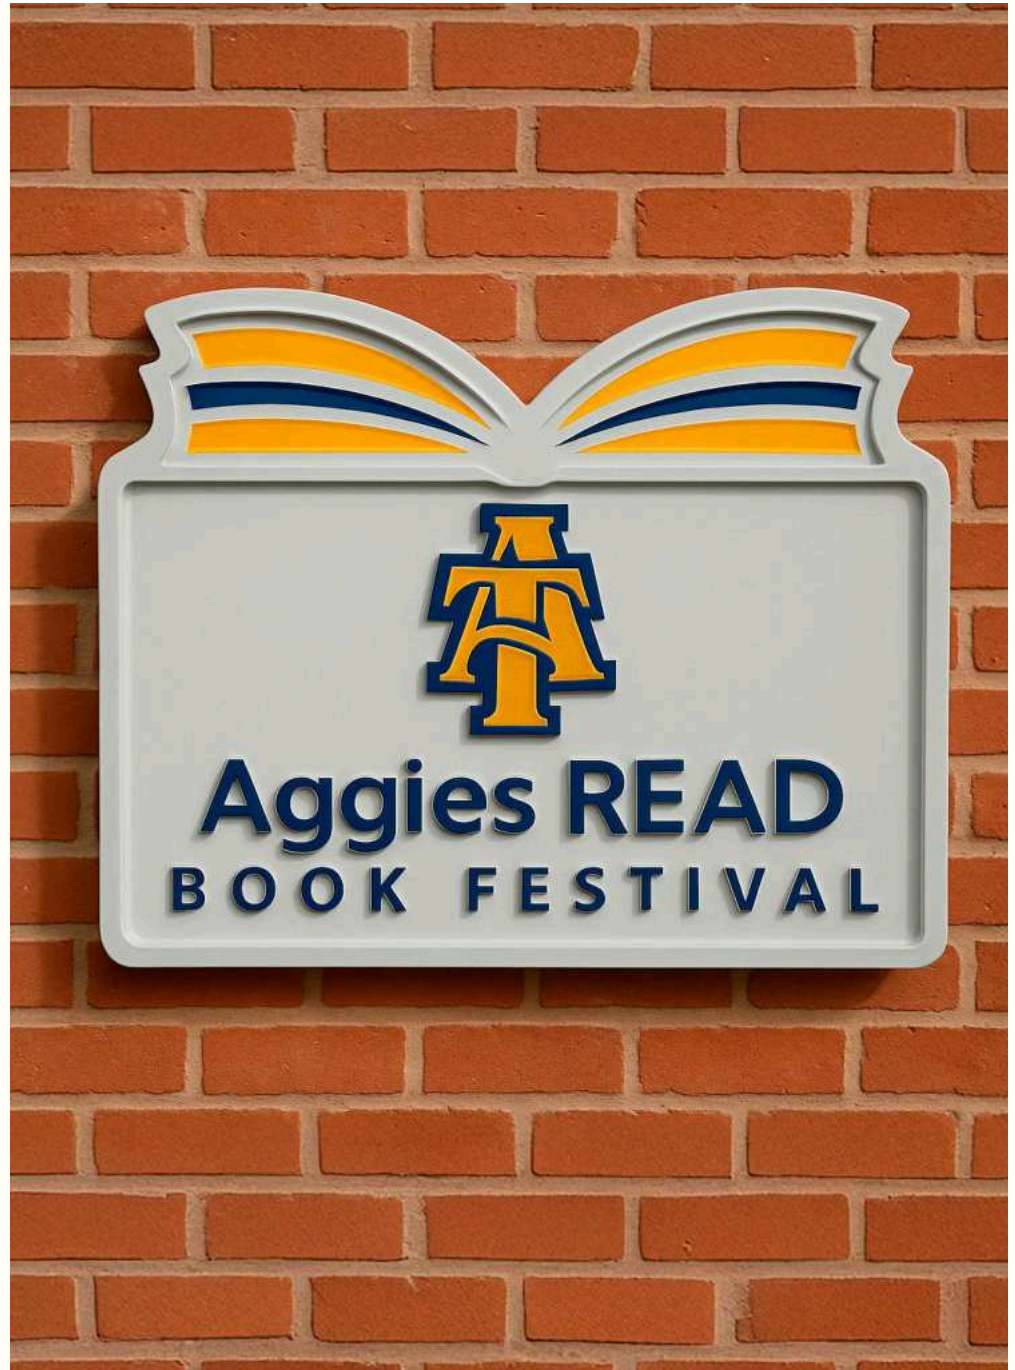

Routed foam signs are a perfect fusion of craftsmanship and technology — delivering signage that's not only functional but visually engaging. At Royal Foam, we take high density foam boards and use state-of-the-art CNC routers to sculpt detailed graphics, logos, and typography directly into the surface.

These signs are perfect for businesses seeking a tailored, high-end look without the structural burden. From storefronts and reception areas to wayfinding signs and trade show displays, routed foam adds sophistication and branding power in equal measure.

Our foam signs can be coated with UV-resistant finishes, weatherproof layers, or protective shells that mimic metal, stone, or wood — without the associated cost and complexity.

Routed signs also offer incredible **flexibility in terms of installation**. They're lightweight and can be wall-mounted, hung, framed, or freestanding depending on your design. Despite being foam-based, these signs are highly durable, and ideal for both interior and exterior use.

Whether you want your brand name cut in relief, a recessed logo, or a sculpted 3D pattern, routed foam can make it happen — fast and affordably.

Durable. Custom. Built to impress

The actual value of routed foam signs lies in their ability to combine artistic **freedom with structural efficiency**. At Royal Foam, we don't just manufacture signs — we engineer them to fit seamlessly into your branding and built environment.

Our signs stand up to the elements thanks to advanced coating options — including polyurea, urethane, or textured finishes that protect against moisture, UV exposure, and physical wear. This makes routed foam a smart solution for outdoor environments like building façades, entrance signs, or exposed displays.

Inside, routed foam becomes a tool for storytelling. Use it to create brand walls, slogan panels, directional signage, or decorative features. Add paint, metallic leafing, digital prints, or layered materials to enhance contrast and bring your sign to life.

Foam's lightweight nature makes routed signage easier and faster to mount, saving time and labor costs. You get a premium, architectural finish without the logistical headaches of wood, metal, or stone.

With Royal Foam, routed signs are more than just a surface — they're a **statement**. Dimensional. Durable. Designed to impress.

2.4

'Architectural Shapes

Add dimension, character, and timeless detail to any structure with custom architectural foam shapes by Royal Foam. From columns and corbels to trims, arches, and moldings — we deliver lightweight, durable elements that replicate traditional materials like stone or wood, while offering greater design flexibility and cost-efficiency.

Design freedom without material limitations

Architectural details are what separate standard construction from stand-out design — and Royal Foam’s architectural shapes allow you to create that distinction without the constraints of weight, cost, or fabrication complexity.

Our foam-based shapes are **custom-cut** from high-density expanded polystyrene (EPS) using precision CNC machinery, then coated with durable, weather-resistant finishes that make them suitable for both **indoor and outdoor use**.

We produce everything from ornate window trims and wall cornices to full columns, decorative corbels, and parapet caps. Whether your vision includes traditional classical motifs or sleek, modern lines — we shape it with architectural integrity and lightweight efficiency.

And **customization isn’t limited to shape** — we tailor dimensions, contours, and finish colors to match any architectural plan or brand aesthetic. This makes our foam shapes a smart solution for commercial spaces, hospitality venues, mixed-use developments, and more.

Plus, foam is resistant to pests, doesn’t rot, and handles temperature changes better than many traditional materials. So you’re not just getting a beautiful detail — you’re getting a durable one.

Elevate every facade — inside and out

Architectural foam shapes are the secret weapon of designers and developers who want bold aesthetics without burdensome logistics. At Royal Foam, we collaborate directly with architects, general contractors, and design-build teams to craft architectural accents that are both stunning and structurally smart.

Our **in-house** design team works with your blueprints or CAD files to ensure seamless integration into your architectural layout.

We also offer fire-rated options, specialty coatings for extreme climates, and surface texturing that can match existing finishes — ideal for restorations or phased renovations.

Best of all? These elements don't just "look good for foam." They look good, period. Clean edges, crisp contours, and architectural scale — all without cracking, sagging, or warping over time.

Whether you're designing a retail center, a boutique hotel, or a custom residence, our architectural foam solutions give you the tools to build creatively and competitively. At Royal Foam, **form meets function in every shape we cut.**

2.5

Wedding Arch Colonnades

Wedding arches and colonnades by Royal Foam combine elegance with engineering — creating large-scale decorative structures that are **lightweight, durable, and visually unforgettable**. Whether it's a grand entrance, ceremonial backdrop, or photo zone, our foam-based wedding elements offer classical beauty without the heavy materials or logistical challenges of traditional builds. **Designed to impress, built to transport, and crafted to customize.**

Architectural grandeur meets practical design

At Royal Foam, we specialize in producing large-format arches, pillars, pergolas, and full-scale ceremonial structures that look like marble, stone, or wood — but are made from high-density foam, making them easy to move, assemble, and reconfigure.

Our wedding arch colonnades are **CNC-cut and hand-finished** to replicate different types of architecture. Columns can be fluted, smooth, square, or round; arches can be straight, curved, or adorned with decorative motifs.

Most designs can be disassembled into modular parts for **easy transport and storage**. We also offer hard-shell coatings that resist wear, weather, and accidental impact, making them suitable for outdoor ceremonies and long-term use. Optional bases, anchor points, and reinforcement systems ensure stability, even on uneven surfaces or in light wind conditions.

Because our structures are foam-based, they're significantly lighter than traditional wood or plaster props.

Whether you're an event planner, venue operator, or decorative rental company, our wedding colonnades give you a way to deliver architectural wow-factor without logistical strain — and with full creative freedom.

Customizable. Reusable. Event-ready

Every venue, theme, and client is different, and Royal Foam makes sure your decorative structures are too. Our wedding arch colonnades are fully customizable in size, shape, texture, and color. We can match the finish to blend seamlessly with venue interiors or provide high-contrast elements that stand out as centerpieces.

These foam-based structures are **designed for repeated use**, which makes them a perfect long-term asset for rental inventories and venue setups. Additionally, modularity allows you to mix and match sections — such as arches with or without side columns, single pillars, layered backdrops, and more — for maximum versatility across various events.

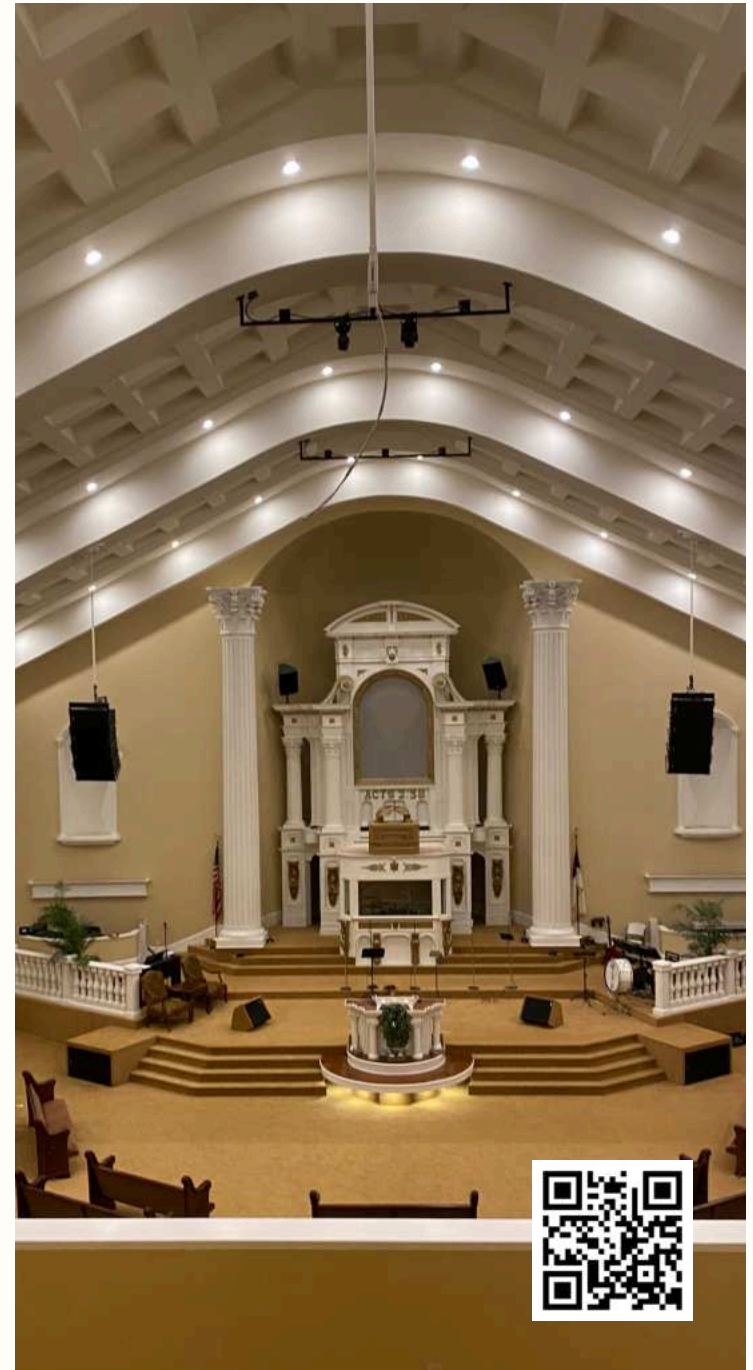

We also offer integration options for floral attachments, lighting rigs, drapery hooks, signage inserts, and more. For high-volume operations, we support repeated production with identical specifications, perfect for franchises or vendors with standard packages.

In short, Royal Foam's wedding colonnades provide the classic beauty of architectural staging — minus the weight, cost, and complications. Designed to travel, engineered to last, and always ready to impress.

2.6

Designs For Places Of Worship

At Royal Foam, we create **custom architectural and decorative elements** designed specifically for places of worship — from detailed altarpieces and ornamental arches to symbolic sculptures and custom signage. Crafted from **lightweight, durable materials** and finished to resemble stone, wood, etc., our designs honor tradition while delivering modern efficiency and design flexibility.

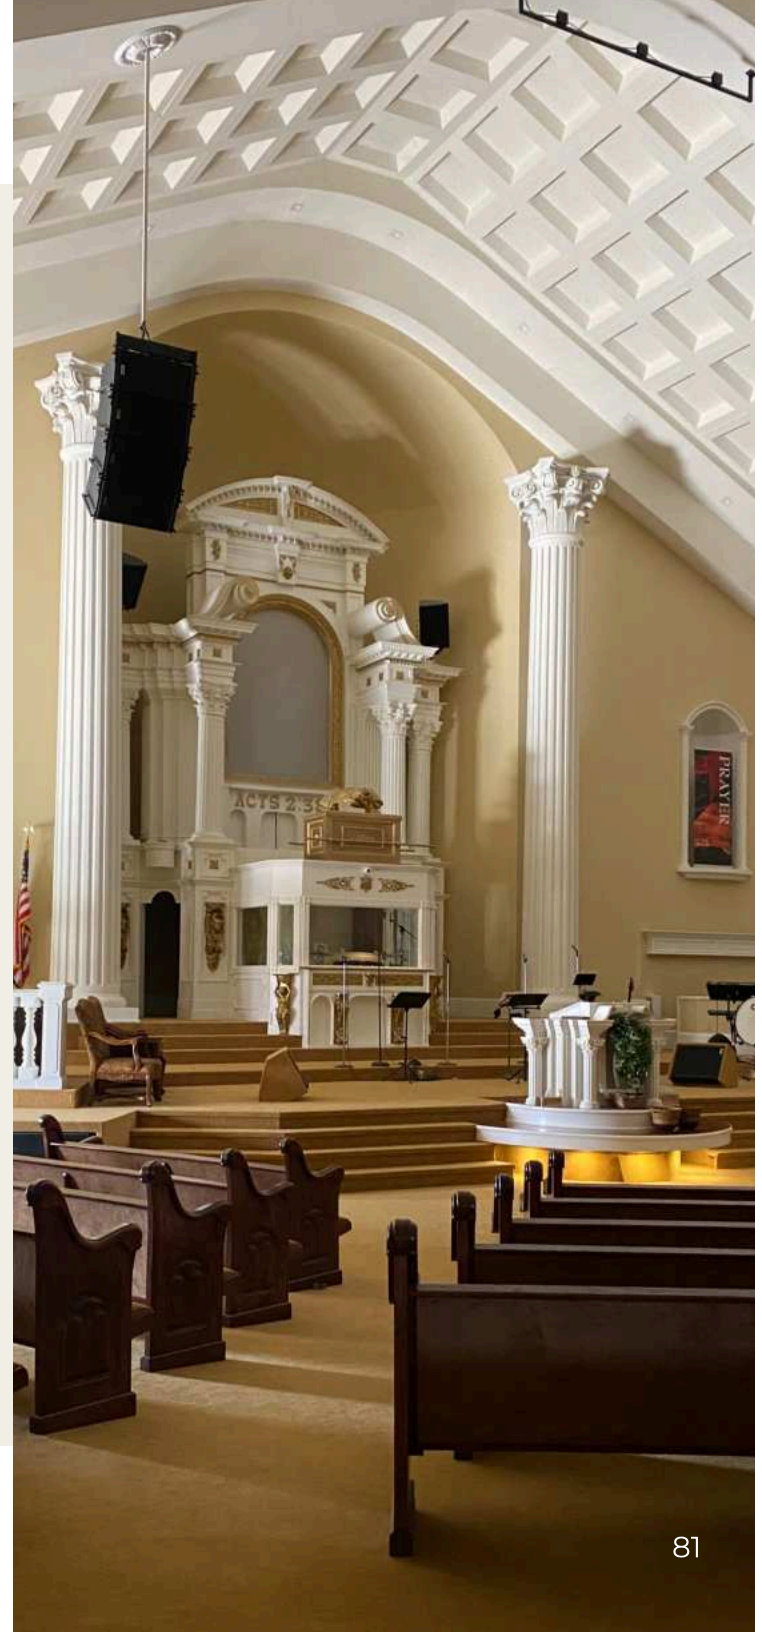

Respectful design, crafted with purpose

Royal Foam works closely with architects, builders, and religious communities to create designs that reflect spiritual meaning and architectural harmony. Whether you're renovating a chapel, building a mosque, restoring a synagogue, or upgrading a multipurpose worship space, our foam-based elements can replicate traditional materials with remarkable accuracy — but without the weight, complexity, or high costs of stone, metal, or wood.

We produce custom arches, domes, columns, iconography frames, decorative trims, and symbolic installations — all designed to match the sacred aesthetics of the space. Our CNC-cut foam cores are finished with hard coatings and hand detailing to ensure **long-term** beauty, even in high-humidity or high-traffic environments.

Our elements can be installed in new constructions or seamlessly integrated into existing structures, without structural modification. We also understand the importance of discretion and respect during religious renovation projects. Our team provides detailed renderings, mockups, and material samples before fabrication, ensuring alignment with both aesthetic goals and spiritual intent.

Material integrity. Spiritual sensitivity. Built to last

Our high-density foam elements are more than decorative — they're engineered to last. Finished with impact-resistant polyurea or textured plaster-like coatings, they can mimic marble, limestone, plaster, wood, or metal — while offering better resistance to cracking, moisture, and aging. That means your altars, columns, or architectural accents will retain their beauty for decades with minimal upkeep.

Royal Foam also offers **full customization**: different variants of finishes; hand-painted similar to marble iconography panels; recessed lighting integration for backlit scriptures or symbolic carvings; and dimensional signage for multilingual or denominational messaging.

Whether you're outfitting a large cathedral or a small community center, our scalable fabrication allows for consistent production across multiple rooms or buildings. For larger-scale projects, we offer full support with CAD drawings, installation diagrams, and on-site coordination if needed.

At Royal Foam, we honor the vision behind every sacred space — and deliver the craftsmanship to bring it to life with grace, detail, and strength.

2.7

Industrial 3D Printing

For projects that demand scale, speed, and design complexity, Royal Foam offers full-service industrial 3D printing. Our large-format machines and custom slicing software allow us to fabricate massive structures, components, and display elements with unmatched precision. Whether you need one prototype or a repeatable production run, we deliver **fast, accurate, cost-efficient results** — ready for finish, assembly, or installation.

High-volume fabrication, high-impact design

Our industrial 3D printing capabilities bridge the gap between imagination and mass production. Using large-format FDM (Fused Deposition Modeling) and SLA machines and high-performance polymers, we create **lightweight, structurally sound** elements for a wide range of industries — from exhibit and event design to product prototyping and commercial architecture.

We can **print individual parts** up to several feet in size — and assemble them seamlessly into massive final forms. Sculptures, props, molds, signage elements, casings, and display frames are all within reach.

Royal Foam works with advanced CAD files and custom slicing strategies to reduce support waste, optimize build time, and ensure dimensional accuracy. We also offer in-house finishing services, so your printed parts are installation-ready and presentation-quality.

3D printing also gives you flexibility across prototyping and scaling: we can quickly produce test models, then scale up production once the design is locked. That's ideal for trade show environments, film sets, marketing activations, or any project where iteration speed and production consistency matter.

From one-offs to rollouts: engineered for efficiency

Royal Foam's industrial 3D printing is engineered for businesses that need **flexibility, speed, and repeatable accuracy**. Our printers use high-quality materials suited for both lightweight and structural needs.

We also understand that B2B clients need more than "just a print." That's why we offer full support across every phase:

- Slicing for minimal material waste
- Post-processing (sanding, gap-filling, sealing)
- Surface coating (polyurea, epoxy, primer, paint)
- Assembly and mounting prep
- Shipping coordination and packaging

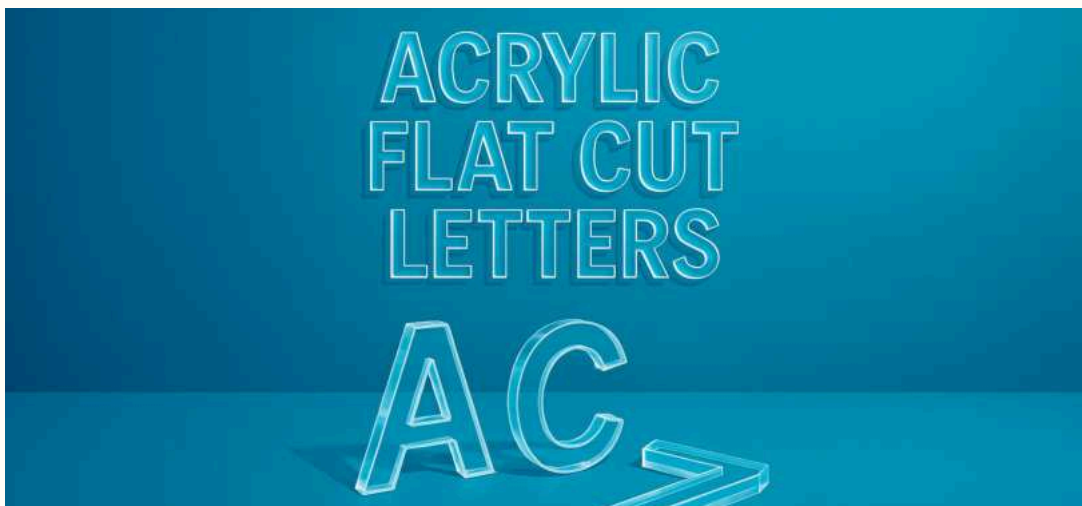

Each project receives CAD-to-production **quality control** — ensuring dimensionally accurate parts that fit consistently across repeat runs or modular systems. We can work with your internal design team or handle the entire process from concept to delivery.

Whether it's a life-sized sculpture for an event, a modular product housing, or architectural components that must meet visual and structural specs — Royal Foam's 3D printing capabilities deliver speed, scalability, and presentation-ready results.

Acrylic Letters & Logos

Acrylic letters and logos offer a **premium, high-gloss finish** that brings brand identities to life with sharp edges, vibrant colors, and a glass-like appearance. At Royal Foam, we precision-cut acrylic signage for clients who need a refined, modern look — ideal for corporate offices, retail stores, shopping malls, and upscale interior branding.

High-definition signage with lasting clarity

We manufacture acrylic letters and logos using UV-stable, cast acrylic sheets for superior clarity and depth of color. CNC and laser cutting allow precise shapes and intricate designs, from small, fine-lettered signage to large, dimensional brand marks. Available in a wide range of thicknesses, acrylic provides a sleek, professional look unmatched by other plastics.

Our acrylic signage can be polished for a glossy edge, painted on the face, or back-painted for a layered, glass-like effect. For branding consistency, we match Pantone colors, apply vinyl overlays, or laminate metallic finishes to achieve the exact tone your design requires. These letters are lightweight, rigid, and suitable for both indoor and select outdoor applications when protected from harsh impact.

Acrylic letters are a popular choice for high-end retail, corporate identity walls, directional signage, and reception areas. They offer a **timeless, modern aesthetic** that complements a variety of architectural styles and interior finishes.

Versatile mounting, custom finishes, and illumination options

Royal Foam's acrylic letters and logos are **fully customizable** to fit your space and design intent. Mounting options include flush application, standoffs for dimensional depth, or integration into larger backer panels. We can prepare **pre-drilled holes**, provide templates, and supply all hardware for straightforward on-site installation.

Acrylic works well in combination with lighting. Face-lit or halo-lit configurations can be integrated to create illuminated signage for greater nighttime visibility or a dramatic interior effect. We use UL-certified LEDs for safe, long-lasting performance.

For clients with multiple locations or recurring orders, our process guarantees repeatable precision and color matching across batches. Whether you need one logo or a nationwide set, we deliver consistent, high-quality results on time.

Acrylic letters and logos by Royal Foam combine elegance, durability, and design freedom — making them a top choice for businesses looking to elevate their branding with sharp, professional, and visually striking signage solutions.
